Re: Decommissioning of 366 South Main St., Route 10, Cheshire, CT site

Dear Sir or Miss:

We performed a final closeout survey at the office site of 366 South Main Street, Cheshire, CT. Sealed sources were removed and transferred to the new office of 1157 Highland Avenue Cheshire, CT 06410. Wastes were allowed to decay for greater than 10 half-lives and then removed as normal or biomedical trash, as appropriate.

The following data summarizes the final survey for ambient radiation (mR/hr) levels and removable contamination (dpm) from selected areas of the closed office. There were no areas demonstrating contamination and the final survey results were:

<u>Area</u>	<u>mR/hr</u>	<u>dpm</u>
Hot Lab (including waste storage)	0.03	< 200
Office Area	0.05	< 200
Stress Lab	0.04	< 200
Imaging Area	0.03	< 200
Hallway	0.03	< 200
Bathroom	0.03	< 200

The background radiation levels were: 0.03 - 0.04 mR/hr (ambient survey), 50 dpm (contamination wipe). The survey instruments used were: Ludlum Model 14C GM Survey Meter, and a Ludlum Model 2200 Scaler/Ratemeter and Shielded NaI crystal with a well.

Respectfully submitted,

William Appicelli, CEO
