Dear Chairman Dale Klein,

I live in proximity to the Indian Point nuclear power plant. Living near this aging nuclear facility, I am deeply concerned about the potential for increased safety problems and environmental pollution, should the NRC relicense it for another 20 years. I am also deeply concerned about the inability to evacuate the region, in the event of an emergency at Indian Point.

In 2003 a New York State-commissioned report conducted by James Lee Witt Associates concluded that the emergency evacuation plans for Indian Point are "are not adequate to overcome their combined weight and protect the people from an unacceptable dose of radiation in the event of a release from Indian Point." The counties surrounding Indian Point and New York State have refused to submit their Annual Certification Letters since the Report was released, yet the Nuclear Regulatory Commission, Federal Emergency Management Agency, and Department of Homeland Security have each year certified the plans without ever providing the public or elected officials a detailed response to the large number of problems with the plans as detailed by James Lee Witt.

I am writing to formally request that the NRC, in the relicensing process for Indian Point, provide the public and elected officials with a comprehensive, detailed response to all of Witt's findings as called for in federal legislation proposed in the U.S. House (649) sponsored by Representatives Hall, Hinchey, Lowey, Engel, and Shays, and U.S. Senate (994) sponsored by Senators Clinton and Schumer. This legislation is also supported by New York Governor Eliot Spitzer.

Sincerely,  
David Dunkleberger
