Gentlemen:

I live in Kleberg County, Texas in an area currently being mined for Uranium by URI, Inc. which is owned has the same parent company as HRI inc.

As a result of the above, I have witnessed firsthand the significant shorcoming of the In Situ Mining as practiced by URI Inc. and the negative environmental impact due to spills, excursions, and the mining company being UNWILLING AND UNABLE to restore the water to baseline (a Seminar on Uranium that I attended today at Texas A & M Univeristy, Kingsville came up with the same conclusion-the technology is not available to completely restore the water to baseline).

Also, I have been involved from the start with the permitting process and it is apparent that the hydrology and geology of our site in Kleberg County is quite different from the hydrology and geology of the La Rosita site (30 miles away) or the Vasquez field (about 50 miles away) all being mined by the same operator for uranium. URI Inc.(the mining company) has recently admitted that it is having difficulting mining in the Vasquez field for that reason.

It is for that reason that I oppose creating a "Generic" Environmental Impact Statement for ISL Milling for any area. That would open the door to any Uranium company to make generalizations not based on fact concerning a specific site and allow them to hand out Generic Envrionmental Impact Statement by the handful.

Thank you,

Teo Saenz R. PH.
