Joseph G. Cordaro, Wildlife Biologist  
National Marine Fisheries Service  
501 West Ocean Blvd., Suite 4200  
Long Beach, California 90802-4213

Dear Mr. Cordaro:

Enclosed is the National Marine Fisheries Service (NMFS) Marine Mammal and Marine Turtle Stranding Report for a sea turtle discovered in the Diablo Canyon Power Plant (DCPP) intake structure.

A live sea turtle was discovered in the 2-1 forebay by a plant operator at about 2:50 pm on July 23, 2007. The turtle was identified as a green sea turtle (*Chelonia mydas*).

As authorized in DCPP's incidental take permit issued September 18, 2006, DCPP staff removed the turtle from the intake structure for release offshore of the Facility. The turtle was lifted by a cargo net and a crane to the back of a pickup truck. Biologists took appropriate measurements and photographs. The turtle was estimated to weigh 85 pounds, with a shell length of 30 inches. The turtle appeared to be in good health based on visual observation. There were a few minor abrasions on the flippers. The left rear flipper appeared to have two bites taken out of it that had healed. Biologists transported the turtle by boat about one half mile southwest of DCPP. In the water, the turtle swam away strongly in a northeasterly direction.

The turtle release was reported to NMFS on July 23, 2007, within the required 48-hour reporting period. In addition, a non-emergency report was made to the Nuclear Regulatory Commission (NRC) within four hours of the NMFS notification on July 23, 2007, in accordance with NUREG-1022, Revision 2, Event Reporting Guidelines, 10 CFR 50.72 and 10 CFR 50.73.

Live green sea turtles were found at DCPP's intake area on seven previous occasions: February 27, 2001, April 16, 2000, August 24, 1999, May 29, 1999, June 12, 1997, January 10, 1997, and April 27, 1994. Green sea turtles are infrequently observed in the coastal waters off of DCPP.
