Far Rockaway, New York 11691

SUBJECT: NEW LICENSE APPLICATION

Dear Mr. Santana:

We received your application dated August 20, 2007, requesting an NRC license to use and possess licensed materials at a facility in Far Rockaway, New York. Your application does not identify the specific licensed materials you wish to possess so we are unable to determine if the City of New York or NRC would have jurisdiction over the license. For this reason your application is being returned to you.

If you are requesting a license to possess byproduct, source or special nuclear materials of less than critical mass, please identify the specific isotope, quantity and form and submit your request for a license to the City of New York at the following address:

New York City Department of Health  
Office of Radiological Health  
2 Lafayette Street, 11<sup>th</sup> Floor  
New York, NY 10007

If you are requesting a license to possess special nuclear materials of greater than critical mass, please identify the special nuclear material, quantity and form and submit your application for a new license to NRC at the following address:

Licensing Assistance Team  
Division of Nuclear Materials Safety  
U.S. Nuclear Regulatory Commission, Region I  
475 Allendale Road  
King of Prussia, PA 19406

Please note that your application must also contain specific information about your training and experience with licensed materials that demonstrate you can use the licensed materials safely; your facilities and equipment for safely using and storing the materials; and your operating and emergency procedures. Enclosed you will find a copy of NUREG-1556, Volume 7, "Program Specific Guidance About Academic, Research and Development, and Other Licenses of Limited Scope." While this NRC guidance document does not apply to your use of byproduct, source or special nuclear material of less than critical mass in Far Rockaway, New York or to the use of special nuclear material of greater than critical mass under NRC jurisdiction, the document will provide you with an idea of what type of information is required in an application for these materials.

J. Santana
