SUBJECT

Control No. 316359 – Regarding request by letter dated July 2, 2007, to delete from NRC License No. 13-23331-01, I-131 as Sodium Iodide for any diagnostic procedures permitted by 10 CFR 35.300.

SUMMARY

In telephone conversation with Ms. Fannin on this date, she was asked about any recent use and disposition of this license authorized material. She related that this material had not been possessed or used by the licensee for at least the past seven years (the length of time she has worked at the facility). She further stated that they understood that if they decided to use the material in the future, that they would first need to amend their license to again authorize its possession and use, but that the decision had been made to delete it from the license at this time, since there are no foreseeable plans for its use.

ACTION REQUIRED

The License Reviewer will amend the license as requested, without further information, based on the above information and the very short half life of I-131 (about 8 days).

In accordance with 10 CFR 2.390 of the NRC's "Rules of Practice," a copy of this conversation record will be available electronically for public inspection in the NRC Public Document Room or from the Publicly Available Records (PARS) component of NRC's document system (ADAMS). The NRC's document system is accessible from the NRC Web site at <http://www.nrc.gov/reading-rm/adams.html> (the Public Electronic Reading Room).
