IE INFORMATION NOTICE NO. 86-05, SUPPLEMENT 1: MAIN STEAM SAFETY VALVE TEST
FAILURES AND RING SETTING
ADJUSTMENTS

Addressees:

All nuclear power reactor facilities holding an operating license or a construction permit.

Purpose:

This notice is being provided as a supplement to Information Notice (IN) 86-05 to inform licensees of additional experience with ring setting adjustments of main steam safety valves (MSSVs). It is expected that recipients will review the information for applicability to their facilities and consider actions, if appropriate, to preclude a similar problem from occurring at their facilities. However, suggestions contained in this information notice do not constitute NRC requirements; therefore, no specific action or written response is required.

Description of Circumstances:

Seabrook, 1985 (Synopsis)

In the fall of 1984, Seabrook's MSSVs (manufactured by Crosby) were sent to Wyle Laboratories for testing. The results of the tests showed that adequate disc travel was not attainable with the factory-set ring settings. Following additional testing, the ring settings were adjusted from the factory settings to obtain the required disc travel.

Vogtle, 1986

On May 14, 1986, Georgia Power Company informed the NRC that 5 of the 20 Crosby MSSVs due to be installed on Vogtle 1 were tested to determine the appropriateness of their as-shipped ring settings (nozzle ring setting of +150 and guide ring setting of -45). The valve settings did not achieve specified relieving capacity. The typical relieving flow was 75% of the specified value. Subsequently all 20 of the valves were shipped to the Crosby high-flow test facility to be tested and adjusted as required to achieve their design relief capacity. Final ring settings are summarized in Attachment 1. Note that these settings in many instances differ considerably from the as-shipped settings. Unit 2 valves are due to be tested in the future.

861016
PDR I&E Notice 86-005

Millstone 3, 1986

On July 29, 1986 while inspecting the A-bank MSSVs, personnel found that the upper and lower adjusting rings were not set to the vendor's (Dresser) recommended settings. After an investigation, it was determined that the vendor had not reset the rings following functional testing because of a procedural inadequacy. Millstone 3 personnel reset all rings to the recommended settings. (Licensee Event Report 50/423-86/043).

Susquehanna 1 and 2

Pennsylvania Power and Light personnel recognized the 6R10 designation used by Seabrook to describe their valves (IN 86-05) as being the same as the Crosby safety/relief valves (SRVs) installed at Susquehanna Units 1 and 2; however, the designation 6R10 is not a model number, but the inlet, orifice, and outlet size of the valve. These SRVs are not the same model as the Seabrook or Vogtle valves, but they do have adjusting rings which determine the capacity and blowdown of the valves. Because of this, the information in IN 86-05 and this supplement may be applicable to boiling-water reactors.

No specific action or written response is required by this information notice. If you have any questions about this matter, please contact the Regional Administrator of the appropriate regional office or this office.

Edward L. Jordan, Director
Division of Emergency Preparedness
and Engineering Response
Office of Inspection and Enforcement

Technical Contact: Mary S. Wegner, IE
