IE INFORMATION NOTICE NO. 84-58: INADVERTENT DEFEAT OF SAFETY FUNCTION CAUSED
BY HUMAN ERROR INVOLVING WRONG UNIT, WRONG
TRAIN, OR WRONG SYSTEM

Addressees:

All nuclear power reactor facilities holding an operating license (OL) or
construction permit (CP).

Purpose:

This information notice is provided as a notification of potentially significant
problems pertaining to inadvertent defeat of safety functions caused by human
errors involving the wrong unit, wrong train, or wrong system. It is expected
that recipients will review and consider actions, if appropriate, to preclude
similar problems occurring at their facilities. However, suggestions contained
in this information notice do not constitute NRC requirements and, therefore,
no specific action or written response is required.

Description of Circumstances:

A large number of reports have been made to the NRC that describe
events in which safety functions were inadvertently defeated as a result of
actions performed on the wrong unit of a multi-unit plant, the wrong train
of systems with redundant trains, or a wrong system. In many cases, the loss
of safety function was not recognized for a long period of time, resulting in
significant degradation of the levels of safety. An example of each type of
event, caused by human error involving the wrong unit, wrong train or wrong
system, is described below. A sample listing from among at least 50 reports
of other similar events that have occurred is contained in Table 1.

On October 2, 1983, an operator was dispatched to lock closed a manual valve on
the discharge side of each of the redundant containment spray pumps for Turkey
Point Unit 3. The activity was required by the procedure for proceeding from
hot to cold shutdown in preparation for a refueling outage. The operator,
instead of closing the Unit 3 valves, locked closed the valves for Unit 4 which
was operating at power. Subsequent to this activity, there was a change in
operators. The replacement operator later went to the Unit 3 containment spray
pump discharge valves and closed them as he found them to be open. He was

CP

PDR

The Hatch Unit 2 event was attributed to personnel error and lack of adequate independent verification. As a part of corrective actions, new identification tags were made and locks were changed so that the keys for valves in one loop will not open the valves in the other loop. In addition, the personnel responsible were counseled and reprimanded.

The FitzPatrick loss of RCIC event with HPCI out of service was caused by personnel error. Following the event, the licensee instituted an awareness program for the technicians in addition to improving the identification of HPCI and RCIC equipment.

Adequate procedures, planning, labeling, awareness and training of personnel, and an independent verification program are needed to prevent the occurrences of such events. The frequency and number of such events being reported to the NRC indicates a need for further industry action in these areas. Additional guidance on independent verification programs is provided in IE Information Notice 84-51, "Independent Verification."

If you have any questions regarding this matter, please contact the Regional Administrator of the appropriate NRC regional office or this office.

Edward L. Jordan, Director
Division of Emergency Preparedness
and Engineering Response

1. Sample List of Recent Inadvertent
Defeat of Safety Function Events
2. List of Recently Issued IE Information Notices

Table 1: Sample List of Inadvertent Defeat
of Safety Function Events

Plant/Date	Event Summary
D.C. Cook 03/14/81	An auxiliary equipment operator was instructed to deenergize breakers for five motor operated valves of the Unit 2 safety injection system. He instead deenergized the breakers of five Unit 1 valves.
Calvert Cliffs 04/17/82	Electricians began work on Unit 2 control element assemblies (CEAs) instead of the assigned Unit 1 CEAs.
Point Beach 04/22/82	An operator was instructed to perform part of a procedure to drain the reactor coolant of Unit 2 which was shutdown. Instead, he performed the procedure steps on operating Unit 1.
North Anna 2 05/28/82	Both trains of the quench spray subsystem and the recirculation spray system were made inoperable because jumpers were installed in the train "A" instead of the train "B" solid state protection output cabinet.
St. Lucie 1 06/29/83	During full power operation, the primary and back-up heat tracing for the boron injection flow paths were isolated for 24 hours. The condition existed because the entire chemical and volume control system heat tracing was isolated rather than only that required for the "A" boric acid piping.
Turkey Point 3 04/19/83	With the unit at 100% power and auxiliary feed-water pump "A" out of service, all steam supply valves for "B" and "C" pumps were found to have been closed for five days. The operators had misidentified the valves and independent verification was not performed.
D.C. Cook 2 06/03/83	During containment spray system testing, operators closed a wrong valve which rendered the train not under test inoperable.
Kewaunee 03/13/84	Both trains of shield building ventilation were taken out of service for one hour when maintenance personnel began work on the "A" train instead of the "B" train.

LIST OF RECENTLY ISSUED
IE INFORMATION NOTICES

Information Notice No.	Subject	Date of Issue	Issued to
