

This map illustrates the Palo Verde River watershed, a large drainage basin in central Texas. The watershed's extent is highlighted in light green, while the river network is shown in blue. A yellow star marks the CPNPP Center Point, located within the Palo Verde River segment. The map shows the river's course from its headwaters in the west, through the Double Mountain Fork Brazos River and Salt Fork Brazos River, and eventually joining the main Brazos River system. Other labeled river segments include the White River, Leon River, Colorado River, Lampasas River, Llano River, San Gabriel River, Yegua Creek, and Navasota River. The watershed is bordered by Oklahoma to the north, New Mexico to the west, and the Gulf of Mexico to the east. A legend in the bottom right corner identifies the symbols for the CPNPP Center Point, the watershed extent, and the river network. A scale bar indicates distances up to 120 miles, and a north arrow is located in the top right corner.
