Doug,

The short answer is we believe no TI is needed, based on Review of the NRR TI, GE Morris input from Region III and the basis provided in the Holtec FSAR (Example) for handling flooding, blocked vents, etc.

Some consideration may be appropriate ISFSI by ISFSI if that study shows that it is determined necessary.

Jim,

Do you have the TI write up?

Doug

Doug,

I'm meeting with Cathy at 8:30am on turnover. Please let me know the status of our answer to the TI question so I can inform her. Also, would you give Anne a call back if you haven't already.

Thanks,
Vonna
