Subject: Reclassification of Reportable Occurrence

File: A-118a

Dear Mr. Keppler:

On March 31, 1978, Mr. H. Kister of your office was notified by telephone concerning a 14-day Reportable Occurrence. The occurrence involved suppression pool purge outlet valve CV 4309 which was found to be leaking excessively during Type C local leak rate testing. This letter is to advise you that after further review, we have determined that the excessive leakage of the valve in itself does not constitute a Technical Specification Violation and is not reportable in accordance with the requirements of Technical Specification 6.11.2.

REGULATORY DOCKET FILE COPY

The total as-found leakage for all Type B and C tests will of course be reviewed for compliance with the Technical Specifications and a reportable occurrence will be submitted if appropriate.

Very truly yours,

*Ellery L. Hammond*
