 ATTN: Mr. Duane Arnold, President
 Security Building
 P. O. Box 351
 Cedar Rapids, Iowa 52406

Gentlemen:

We have reviewed the modifications to your inservice inspection program as described in Amendment 16 to the Duane Arnold Energy Center Final Safety Analysis Report. These modifications include additional inservice inspection of Safety Class 2 components and also revise portions of the inservice inspection program for Safety Class 1 components. Amendment 16 implements the first part of the commitment contained in your letter of January 11, 1974 addressed to Mr. A. Giambusso which states that (1) within one year after the issuance of your operating license you will complete a study to determine the extent of your ability to comply with the 1972 Winter Addenda to Section 11 of the ASME Code, and (2) it is your intent to begin implementing the approved program two years after the issuance of your operating license.

Based on our review of Amendment 16, we find that the proposed modifications to your inservice inspection program are acceptable. We request that you inform us within 30 days of the receipt of this letter of the date that you intend to submit modifications to the Technical Specifications to implement the revised program. Your proposed modifications to the Technical Specifications should include a requirement to submit a report to us at the end of each ten-year inspection interval that defines which of the following examination categories, if any, that could not be completed:

1. Categories N, L-2, and M-2 for Safety Class 1 components, and
2. Category C-H for Safety Class 2 components.
