

Single Event Report

NMED Item Number: 050103

Narrative:

Last Updated: 04/14/2008

Schlumberger reported that the licensee has a stuck well logging source tool in a well located in Knott County, Kentucky. When trying to retrieve the tool, it broke in half. The upper portion of the tool, containing the Am-241 source, was retrieved with no radioactive contamination detected. The rest of the tool, containing the Cs-137 source with an activity of 62.9 GBq (1.7 Ci), is at an estimated depth of 3,460 feet. There is no source rupture or radioactive contamination. The licensee will pour 500 feet of cement on top of the stuck source and then place a wipstock on top of the cement plug. State of Kentucky Department of Radiation Control personnel will be present when the well is plugged. The INL has requested additional information for this event.
