JOSEPH M. RICHARDS
 Manager-Occupational Health and Safety

Dear Dr. Lodhi:

03038027
 Per our recent conversation, in addition to the RSO change requested for NRC license #47-31367-01 by my letter to the NRC dated August 4, 2011, the licensee (Consolidation Coal Company, Shoemaker Mine Preparation Plant) is requesting to add to this Specific license, three Generally Licensed devices presently located at the plant.

An inventory of the Generally licensed devices at the plant is shown below.

Manufacturer	Model No.	Serial No.	Isotope	Activity	NRC Device Key
TN Technologies, Inc.	5201	B2263	Cs-137	100 mCi	591563
TN Technologies, Inc.	5203	B208	Cs-137	1000 mCi	349411
TN Technologies, Inc.	5203	B209	Cs-137	1000 mCi	349412

Note that the latest General License registration packet was submitted to the NRC on 5/9/11.

The only device currently listed on the Specific license is one Thermo Gamma Metrics Model CQM (CB-HI) Cross-Belt Elemental Analyzer fixed gauging device.

Please note that a letter will be sent to the GLTS Program in Rockville, MD to remove these three devices from the annual General License registration program, and a letter will also be sent to the manufacturer (i.e., Thermo Fisher Scientific) informing them that these Generally Licensed devices will be placed on the Specific License identified above. You will be copied to both letters.

We appreciate your cooperation in this matter. Should you have any questions or concerns, please contact me.

Sincerely,

On Behalf of Consolidation Coal Company
