Subject: FW: 2.206 Petition on BWRs with MkI & MkII Containments

For your information we have received a petition from the Union of Concerned Scientists (UCS) requesting that the NRC issue a Demand for Information (DFI) to all BWRs with Mk I or MkII containments. UCS requests that the DFI require each licensee to describe how their facility complies with GDC 44 and 10 CFR 50.49 with respect to the heat load and environmental conditions created by an accident involving the spent fuel pool. The petition is available in ADAMS under Accession No. [ML11213A030](#).

The assigned petition manager is Ed Miller, the Project Manager for Oyster Creek. The UCS representative (Mr. Lochbaum) has declined to address the Petition Review Board in a public meeting. Until I learn otherwise, please use me as the point of contact if you need further information.
