Nuclear Pharmacy Certificate Program Concept

The School of Pharmacy and Pharmacal Sciences at Purdue University offers a Certificate Program in Nuclear Pharmacy. The goal of the certificate program is to provide fundamental information to post-graduate pharmacists that will serve as a foundation for attaining competency as practitioners in nuclear pharmacy. The program follows the guidelines for nuclear pharmacy training prepared by nuclear pharmacists in the American Pharmaceutical Association, Section on Nuclear Pharmacy Practice.

This student completed the videotaped distance learning portion of the certificate program. This training module utilizes self-study concepts, including lectures on videotape and correlated reading assignments. The nuclear pharmacy manager, or other qualified nuclear pharmacist at the practice site, serves as the clinical instructor and mentor for the pharmacist in training. This portion is self-paced by the trainee with regular examinations returned to Purdue to assist in monitoring the learning process.

CONDITIONS

10. Radioactive materials shall only be used or stored at the licensee's facilities located at 65 Shawmut Road, Unit 8, Canton, Massachusetts.
11. This license is subject to an annual fee as determined by the Executive Office for Administration and Finance.
12. The Radiation Safety Officer for this license is James Flynn, R.Ph.
13. Licensed material listed in Item 6 above is authorized for use by, or under the supervision of, the following individuals for the materials and uses indicated:
- A. In accordance with 105 CMR 120.128(J)(2)(a) or (d), pharmacists working as authorized nuclear pharmacists.

 - C. At least one individual authorized by Paragraph A or B of this Condition shall be physically present at the authorized place of use whenever licensed material is being used.
14. The licensee shall not acquire licensed material in a sealed source or in a device that contains a sealed source unless the source or device has been registered with the U.S. Nuclear Regulatory Commission under 10 CFR 32.210 or with an Agreement State. 15. A. The sources specified in Item 7 shall be tested for leakage and/or contamination at intervals not to exceed six months. Any source received from another person which is not accompanied by a certificate indicating that a test was performed within six months before the transfer, shall not be put into use until tested.
 - B. Any source in storage, and not being used, need not be tested. When the source is removed from storage for use or transfer to another person, it shall be tested before use or transfer.
 - C. Tests for leakage and/or contamination shall be capable of detecting the presence of 185 Bq (0.005 μ Ci) of radioactive material on the test sample. If the test reveals the presence of 185 Bq (0.005 μ Ci) or more of removable contamination, the source shall be removed from service and decontaminated, repaired or disposed of. A report of this shall be filed with the Director of the Radiation Control Program within 5 days of the date the leak test result is known. The report shall specify the source involved, the test results and the corrective action(s) taken. Records of leak test results shall be kept in units of becquerel or microcurie and shall be maintained for inspection by the Agency.
 - D. The licensee is authorized to collect leak test samples for analysis by the licensee. Alternatively, tests for leakage and/or contamination may be performed by persons specifically licensed by the Agency, or the NRC, an Agreement State, or Licensing State to perform such services.
16. Sealed sources containing licensed material shall not be opened or sources removed from the device by the licensee.
 17. The licensee shall conduct a physical inventory every six (6) months to account for all sealed sources received and possessed under the license. The records of inventories shall be maintained until inspection by the Radiation Control Program and shall include the quantities and kinds of radioactive material, location of sealed sources and the date of the inventory.
 18. Reagent kits may be redistributed to persons licensed pursuant to 105 CMR 120.547 or equivalent licenses of the Agency, the U.S. Nuclear Regulatory Commission or an Agreement State.
 19. The licensee is authorized to hold radioactive material with a physical half-life of less than 120 days for decay-in-storage before disposal in ordinary trash, provided:

Before disposal as ordinary trash, the waste shall be surveyed at the container surface with the appropriate survey instrument set on its most sensitive scale and with no interposed shielding to determine that its radioactivity cannot be distinguished from background. Except for syringe labels, all radiation labels shall be removed or obliterated.
- B. A record of each such disposal permitted under this License Condition shall be retained for three years. The record must include the date of the disposal, the date on which the radioactive material was placed in storage, the radionuclides disposed, the survey instrument used, the background dose rate, the dose rate measured at the surface of each waste container, and the name of the individual who performed the disposal.
20. In addition to the possession limits in Item 8, the licensee shall further restrict the possession of licensed material to quantities below the minimum limit specified in 105 CMR 120.125(C) for establishing financial assurance for decommissioning.
21. Radioactive waste may be picked up from the customers of the licensee and disposed of in accordance with the statements, representations and procedures in the application dated May 31st, 2007 and the letters dated August 5th and December 11th, 2008
