SUBJECT: Supplemental Information

Dear Mr. Wertz:

Based on our discussion during the teleconference conducted on August 10, 2011, the following supplemental information is being provided per your request:

1. The most recent UUTR Security Plan (SP) is Revision 7, dated July 3, 2003.
2. Within the UUTR TSs (submitted July 15, 2011), the Definition "Reactor Secured" has two items numbered 2.2. Please number accordingly.
3. Within the UUTR TSs (submitted July 15, 2011), TS 3.5, Specification No. 2, was inadvertently omitted. Please add the following to TS 3.5:

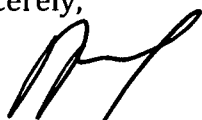

In the event of a substantial release of airborne radioactivity within the reactor area, the ventilation system will be secured or operated in the limited intake mode to prevent the release of a significant quantity of airborne radioactivity from the reactor area.

4. The only SNM enriched greater than 20% (HEU) possessed by UUTR is located in the fission chamber described in the UUTR SAR. The quantity of HEU is less than 2 grams.

A020
1 nrr

5. The 5-curie plutonium-beryllium sealed source possessed by UUTR contains less than 120 grams of Pu-239.

Sincerely,

Tatjana Jevremovic, PhD
