I agree, except we lost. We can continue the fight or develop an AMP. Developing an AMP would be the path of least resistance, and risking approval on this item is just not worth it, even if morally right.

I don't agree with NYS-8, Transformer. Specifically, we should not develop an AMP. This issue has been addressed by the industry (passive) and we need to provide all of the documentation that justifies not including them. We would be the only plant in the country to develop an AMP as far as I know.
