EX. 6

Adam, many of the older wells at Hatch are not viable (and some of the monitoring locations are actually manholes or outfalls) so I have only provided the number of groundwater wells in the formal program.

Hatch peak H3 value November 2003 T12 - shallow aquifer monitoring well 4.07 E06 pCi/L
30 onsite groundwater monitoring wells (in formal program)

Farley peak H3 value September 2008 R3 - shallow aquifer monitoring well 5430 pCi/L
18 onsite groundwater monitoring wells (in formal program)

Vogtle peak H3 value July 2009 802A - shallow aquifer monitoring well 1320 pCi/L
21 onsite groundwater monitoring wells (in formal program)

Let me know if you have questions or need other info.
