

Licensee Operating Test Comments

Note to File – the op test was submitted to the licensee in segments as we completed it. The entire Op test had been submitted to the licensee for their review by 7/15/11. None of our original exam items were replaced. Most of the comments made by the licensee were editorial or instructions for the booth operators. The most substantive technical changes were made to the SRO Admin JPM A-3 during exam pre-validation (the week of 10/24) and that was based on the CE's feedback to make this exam item more challenging.
