Re: OPDES Permit OK0000191
Sequoyah Fuels Corporation

Dear Ms. Radcliffe:

Please find enclosed the original and one copy of the completed Discharge Monitoring Report (DMR) for the subject period December 1 through December 31, 2011, for Sequoyah Fuels Corporation.

The total suspended solids (TSS) limit of 114 mg/l was exceeded at Outfall 008 for samples collected on December 14, and 19, 2011, with TSS analyses of 735 and 125 mg/l. The analytical reports containing these values were received by SFC on January 12, 2012 and reported by phone to DEQ within one hour after SFC became aware of the results. The source of the high suspended solids is from activities related to construction of a disposal cell at the facility. Corrective actions are being addressed through a consent order entered into between SFC and DEQ.

If you have any questions or require further information, you may contact me at 918/489-5511 (Extension 223).

Sincerely,

Scott C. Munson, Manager
Environmental
