I am seriously against the plans for building a new nuclear power plant in Gaffney, SC or anywhere for that matter. I thought that any nuclear construction was on hold following the disaster in Japan. I thought that taught us how dangerous this form of energy can be. I know the argument is that all precautions are taken, but that can never be completely foreseen and the ramifications are too great. I especially don't like being within 60 miles of a possible disaster. There are numerous reasons these plants are not the best form of producing energy, but the Japan disaster experience should be enough to realize we would be foolish to continue to build new nuclear power plants. The costs of waste disposal and numerous environmental hazards, plus the many risks just don't make it sensible. Put your money and research into safer, more reasonable renewable energy sources and negotiate for more subsidies from the government for these alternative energies and then they might actually happen. Germany has been able to turn this around, why not the US, too.
