QUESTIONS from Containment and Ventilation Branch 1 (AP1000/EPR Projects) (SPCV)

06.02.02-***

In the PTN COL Application, Part 7, Departures and Exemptions, PTN DEP 2.0-3 increases the maximum noncoincident wet bulb temperature from 86.1° F to 87.4° F. This departure justification states that this increase does not change the maximum containment pressure value reported in the DCD. Please describe the analyses supporting this statement, including initial conditions, break locations, resulting peak pressure and pressure at 24 hours.
