Comment:

I wish to refute that this power station is a good idea for these reasons:

1) This project is not carbon neutral. It has a much larger cast in carbon through the building of the infrastructure, and the transportation of hazardous materials

2) Our unstable climate is going to play havoc with the plants needs for water &

3) I disagree that this project is safe for the ecology. Countless animals, plants, our water will definitely be threatened by a part of the plant ya'll don't even have to be concerned with - the hazardous wastes. I fear that the waste materials will pose a dangerous challenge for generations to come

4) Conservation & efficiency alone can eliminate the need for this plant

5)

Kimberly Ryland
