To all it may concern,

Aren't we, as a nation, getting too smart for this 'Nuclear' method of energy? Meaning 'Nuclear' energy in relation to more earth friendly renewable methods and other energy options available to supply electricity to this nation.

No more 'Nuclear' Plants should EVER be built with the risk knowledge that just the by product of 'Nuclear' being nuclear waste, has been defined as "POISON" to people, plants and any life form on this planet, and should not be produced day after day, month after month, year after year, and piled up somewhere or anywhere. Stacks and stacks of extremely dangerous Poison stored, a time bomb set to strike and no defense available. Due to greed, indecision, convenience, lack of proper planning and morality, we are our own worse enemy. We can't continue on with this process. We must stop, look and listen to knowledge. Would you or I stir up a pot of poison on our stove, then put it in canisters, and walk around these stored canisters of volatile lethal poisonous substance in our basement cupboards? No, because we are educated and concerned with the beginning and ending of that process. Would you run daily around your house with a big sharp knife in your hand? No, you might trip or someone could come around the corner unplanned.

I want to invest in energy that is safe from beginning to end. I want to plan knowing that I am not gambling with our future or our childrens future. I want this Nuclear Plant stopped. I think it would be far better to have each building, business or home installed with a separate power source either maintained by "the big power company" or the owner. Using solar, renewable, wind, a power source that is uniquely correct and safe for each building. Let's slow down, take our time to plan and look at the whole picture. For it is far better to do it right the first time as we may not get a second chance. Somethings can never be reversed, or corrected no matter how great the effort.

But 'risk' is a dangerous, unnecessary method to include for the approach to any issue when that 'risk' can be ruled out. As this Nuclear Plant project stands now it has too many risks. Our knowledge of the risks involved in Nuclear should be the basis for our decision. We should not put ourselves in a position to settle for these type of 'risk' by thinking these 'risk' must be included as part of our solution for energy.

We are too great a people, thus too great a Nation to settle for a quick, dangerous, risky solution. We tell our children and grandchildren that we are getting smarter each day, and they see each generation learning from

the past generation, thus we learn and know how to make better decisions.
Let's keep on making better decisions. Please stop this Nuclear Plant
construction.

Sincerely,
Grace Gilbert
