To the Members of the NRC,

This letter is to comment on the application by Duke Energy to build new nuclear reactors on the Broad River.

I OPPOSE this license application! It's really simple: nuclear energy is dangerous, non-renewable and extremely not cost efficient! You already know this... if you don't you have your heads in the sand!

From the mining of the uranium which devastated Native American land and causes lung disease in the workers, to the huge amounts of water, an increasingly precious resource, needed to cool the reactors, to the routine radioactive releases, to the extremely toxic waste whose storage

has no solution, the production of electricity by nuclear means is not only an environmental disaster, but is morally bankrupt.

I could write about the increases of cancer near nuclear plants, the degraded water and rivers, the potential of damage to ^{nuclear} plants by earthquakes, and more, but you should know all this by now.

NO NEW NUCLEAR PLANTS!
SHUT THE EXISTING ONES DOWN!

Let's shift to safe renewables:
wind, solar. It can be done,
let's do it.

Sincerely,

Anne Craig
