RECEIVED
Dear NRC Members:

I was living in southern York County PA when the accident at Three Mile Island occurred. Later I heard numerous testimonies to negative impacts of radiation releases, from 2-headed calves to misshaped vegetables to women losing their unborn babies.

And now we learn about the meltdown at Fukushima where the scale of the event had to be raised from level 4 to level 7, the highest, the worse it can be. Children, the most vulnerable to radiation, were exposed to high levels, levels that were raised to 10 times the level causing cancer in nuclear weapons.

I live in one of the most pristine and biologically diverse regions of the world. Please abandon dangerous nuclear technology and instead fund truly green energy sources we can live with.

Sincerely,

Ray Heavne
