STD DEP T1 1.1-1, Definition of As-Built

The information in this section of the reference ABWR DCD is incorporated by reference with the following departure.

As-built means the physical properties of the structure, system, or component following the completion of its installation or construction activities at its final location at the plant site. In cases where it is technically justifiable, determination of physical properties of the as-built structure, system, or component may be based on measurements, inspections, or tests that occur prior to installation, provided that subsequent fabrication, handling, installation, and testing do not alter the properties.
