Subject: Staff Question Regarding SDGs::Prop Review Required

Chet,

The following question arose regarding the standby diesel generators. A response would be beneficial to the staff as they continue to internalize the design aspects during pre-application. An email response would be fine, but reminder that I will add that publicly to ADAMS. Please also advise whether the information contained in the question causes this email to be proprietary; if so, it may be withheld from the public in our ADAMS system.

In the event of a LOOP or SBO, it is not clear if operation on battery power alone is sufficient for the first 72 hours, or if the SDGs would be required during this time frame. From previous information it appears that the SDGs must be used to accomplish the High Pressure DHR function during this time period. Can you help us understand this thinking?

Regards, Joelle
