Subject: Enough is enough....No more licensing of reactors...they are not safe!

Is it because woman have traditionally done the clean up that you feel not having a solution to deal with the mess of radioactive waste is permissible, an unimportant matter? inThe NRC's "confidence" that on-site storage for 120 years (60 during reactors operations, 60 after reactor shutdown) is safe and secure would be laughable, if it weren't so seriously wrong. 120 years is half as long as the United States has been an independent country (1776 to 2012, 236 years). A lot can go wrong in 120 years. NRC's consideration of 200 to 300 years of on-site storage is even more preposterous. This is not "interim" or "temporary" on-site storage. This is de facto permanent on-site storage, in any common understanding of the term because the industry, the government has not figured out another way to deal with this hellish by=product!
