## **DRAFT SUMMARY OF INFORMATION COLLECTION REQUEST**

Title: Request for Information Pursuant to 10 CFR 50.54(f) Regarding Recommendations 2.1, 2.3, and 9.3 of the Near-Term Task Force Review of Insights from Fukushima Dai-ichi Event (3150-0211)

Current Burden/Responses: 461,067 hours/485 responses (note that this includes hours to complete all tasks in the 50.54(f) letter, not just the burden for the next three years)

Proposed Burden/Responses: 369,960 hours/489 responses

Burden Attributable to Third Party Collections: n/a

Frequency of Response: On occasion

Number of Respondents: 110 (104 power reactor licensees + 2 reactors in the process of resuming licensing + 2 COL applicants [each with 2 units, for a total of 4 COL units]). All respondents will need to do something every year, so the number of respondents is not annualized (divided by three)

Reasons for Changes in Burden/Responses:

The emergency clearance request was approved on March 6, 2012, as a new collection with a total burden of 1,383,200 hours and 1,456 responses (annualized to 461,067 hours and 485.3 responses).

The current request is for 1,109,881 hours and 1,466 responses (annualized to 369,960 hours and 489 responses), a decrease of 91,107 annualized hours and an increase of 3 responses.

The decrease in burden from the original request is due to the fact that the current request takes into account the accrual of burden over time. Some of the activities in the 50.54(f) letters require licensees to perform analyses and submit reports up to seven years after receiving the 50.54(f) letters from the NRC. The original request included burden that would be incurred outside of the three year clearance period, whereas the current request includes burden for only those information collection activities that are estimated to be conducted during the next three years.

The increase in responses from the original request is due to the addition of 6 respondents: 2 reactors in the process of resuming licensing, and 2 Combined License (COL) applicants (2 units each). The power plant licensees will be asked to perform all information collections (seismic and flooding reevaluations and walkdowns and emergency preparedness evaluations). Reactors resuming licensing will be asked to perform seismic and flooding reevaluations and emergency preparedness evaluations, but not walkdowns, as they have not yet completed construction. COL applicants will be asked to submit emergency preparedness evaluations only. The addition of these respondents was determined to be necessary after submission of the original request, and will provide information from these licensees that is not available from any other source.

Level of Concurrence: Branch Chief  
Projects Management Branch  
Japan Lessons Learned Project Directorate  
Office of Nuclear Reactor Regulation

Recordkeeping Requirements in Accordance with the Retention Periods for Records Rule  
There are no recordkeeping requirements.

Abstract:

Following events at the Fukushima Dai-ichi nuclear power plant resulting from the March 11, 2011, earthquake and subsequent tsunami, and in response to requirements contained in Section 402 of the Consolidated Appropriations Act (Public Law 112-074), the NRC sought an expedited clearance from OMB to allow the collection of information from power reactor licensees pursuant to 10 CFR 50.54(f). OMB approved this clearance, which will expire on September 30, 2012. The NRC is currently preparing to resubmit the collection to OMB under normal clearance processes. The information requested includes seismic and flooding hazard reevaluations to determine if further regulatory action is necessary, walkdowns to confirm compliance with the current licensing basis and provide input to the hazard reevaluations, analysis of the Emergency Preparedness capability with respect to staffing and communication ability during a prolonged multiunit event.
