- *Fundamentals of Concrete*, CD062, PCA 2007

**Up to 8% Air**

**7-15% Cement**

**60-75% Aggregates  
(Coarse and Fine)**

**14-21% Water**

# Components of Concrete

# Types of Concrete

Design and  
of Concrete  
Mixtures

- Bookcrete
- Labcrete
- Realcrete

# Quality Concrete

- A mixture of CEMENT, WATER, and AGGREGATES that will meet the requirements under which it is expected to serve.

# Fresh Concrete Properties

- Consistency
- Workability
- Uniformity
- Bleeding
- Setting & Hardening

# Hardened Concrete Properties

- Drying Rate
- Strength
- Durability
- Permeability & Watertightness
- Abrasion Resistance
- Volume Stability & Crack Control

# ESSENTIALS of Quality Concrete

1. Suitable Materials
2. Proper Proportioning, Mixing, and Transporting
3. Proper Placing & Consolidation
4. Proper Finishing & Jointing
5. Proper Curing

# Avoiding Problems

- Design- Constructibility
- Mix Design
- Materials Selection
- Placement Procedures
- Environment

# Design-Constructibility

---

- Reinforcement location
- Tolerances
- Joints

# Mix Design

---

- Materials
- w/cm
- Slump
- Strength
- Durability
- Aesthetics

# Materials Selection

---

- Cement
- Supplementary Cementing Materials
- Water
- Aggregates
- Admixtures

# Placement

---

- Transportation
- Placement
- Consolidation
- Finishing
- Curing

# Environment

---

- Hot & Cold Placement
- Freeze-Thaw Cycles
- Chemical

# Summary

## **Desired Properties of Concrete:**

- Consistency
- Workability
- Uniformity
- Bleeding
- Setting & Hardening
- Drying Rate
- Strength
- Durability
- Permeability & Watertightness
- Volume Stability & Crack Control
