MEMORANDUM TO: Yoiria K. Diaz-Sanabria, Chief
Subsequent Renewal, Guidance, and
Operations Branch
Division of License Renewal
Office of Nuclear Reactor Regulation

FROM: Stacie S. Sakai, Sr. Project Manager /RA/
Subsequent Renewal, Guidance, and
Operations Branch
Division of License Renewal
Office of Nuclear Reactor Regulation

SUBJECT: SUMMARY OF MEETING TO RECEIVE COMMENTS ON
SUBSEQUENT LICENSE RENEWAL

The U.S. Nuclear Regulatory Commission (NRC) staff and interested stakeholders met on May 9, 2012, to discuss issues for consideration for subsequent license renewal. The agenda and slide presentations; written electronic comments; and meeting transcript are available in the NRC's Agencywide Documents Access and Management System (ADAMS) under Accession Nos. ML12135A610, ML12157A549, and ML12158A545, respectively. The meeting transcript has been selectively edited to provide the best representation of what was stated during the meeting. However, there may be parts of the transcript that may not provide an accurate representation of what was stated. Enclosed is a list of the meeting participants.

A summary of the meeting's discussions follows.

1. Process Issues

The staff presented on the current process of license renewal. Panelists for the process issue panel were David Lochbaum, Union of Concerned Scientists; Richard Webster, Public Justice; Mary Lampert, Pilgrim Watch; and Garry Young, Nuclear Energy Institute. Process issues were presented by each of the panelists followed by a discussion among the panelists, and then a discussion by all meeting participants. The process issues discussed included ensuring revised guidance (e.g., Standard Review Plan-License Renewal (SRP-LR) and the Generic Aging Lessons Learned (GALL) Report) are retroactively applied to previous re-licensed plants; considering applicability of exemptions, waivers, and other grandfathering from regulations during the license renewal process; requiring implementation of cost beneficial safety upgrades; reevaluating issues that were considered but not required for first license renewals (e.g. emergency planning, radioactive waste, and health); financial and procedural difficulties in the hearing process for interveners; a requirement to have mandatory hearings for all renewals; and consideration of timing for submittal of an application for subsequent license renewal. Comments were also made on the experience of the current license renewal program; the stability, predictability, and transparency of the

current process; and the regulations being appropriate and well defined to ensure safe continued operation.

2. Safety Issues

The staff presented on the safety issues for license renewal. Panelists for the safety issue panel were David Lochbaum, Union of Concerned Scientists; Richard Webster, Public Justice; Mary Lampert, Pilgrim Watch; Michael Fallin, Nuclear Energy Institute; Sherry Bernhoft, Electric Power Research Institute; and Richard Reister, Department of Energy. Safety issues were presented by each of the panelists followed by a discussion among the panelists, and then a discussion by all meeting participants. The safety issues discussed included additional one-time inspections, adding severe accident prevention and mitigation into the current licensing basis, identifying new aging mechanisms, requiring greater than 95 percent certainty in design margins, and the research being conducted on neutron embrittlement of the reactor pressure vessel, concrete and containment aging, and improved cables testing.

3. Environmental Issues

The staff presented on the environmental issues for license renewal. Panelists for the environmental issue panel were Richard Webster, Public Justice; Mary Lampert, Pilgrim Watch; Ricky Buckley, Nuclear Energy Institute; and Scott Wilson, Environmental Protection Agency. Environmental issues were presented by each of the panelists followed by a discussion among the panelists, and then a discussion by all meeting participants. The environmental issues discussed included thermal discharges and cooling water systems both in general and as they apply to National Pollutant Discharge Elimination System (NPDES) permits; performing an evaluation of Severe Accident Mitigation Alternatives (SAMAs) based on new and significant information; inadequacy of current evaluations of SAMA; consideration of socioeconomic impacts in SAMA analyses; evacuation impacts; and environmental justice. Comments on environmental issues were also made on how the current regulatory structure provides stability and an overall benefit by fostering the continued safe use of non-greenhouse gas emitting electricity; the existing license renewal process is robust, comprehensive, and transparent to all stakeholders; existing regulations to review the generic findings in the generic environmental impact statement on a 10-year cycle allows for the incorporation of lessons learned and operating experience; the process actively involves other regulatory agencies; and if emergent issues arise, there are processes in place to ensure they are addressed in a timely manner for protection of public health and the environment.
