Subject: Support of JL Shepherd & Associates

.Mr. Pierre Saverot.

I'm responsible for a radiation effects laboratory here in El Segundo CA.

We process (irradiate) material, microcircuits and optical fibers for many customers.

We have Co-60 gammacells that are in use daily, these gammacells are maintained, calibrated and refurbished by JL Shepherd & Associates in San Fernando CA.

When our gammacells are refurbished or new material is added we contract with JL Shepherd & Associates to perform this work.

If JL Shepherd & Associates were not able to perform the refurbishment and material load we could not continue to perform our business.

If a permit or extension is required for JL Shepherd & Associates to perform the refurbishment and material load for our gammacells.

I recommend and request that this permit or extension be granted to JL Shepherd & Associates.

Thank you.

Edward Craig
