

June 26, 2012

Dear Licensee,

As many of you are aware, the U.S. Nuclear Regulatory Commission has been actively reaching out to licensees to encourage online usage of the National Source Tracking System (NSTS). Using the online system has many advantages over the other methods for reporting sources such as being faster, easier, and more secure. Online reporting also minimizes errors or follow up inquiries and improves accountability more than other reporting methods, such as fax and email.

As part of our efforts to encourage use of the online NSTS, we have prepared this outreach packet. Enclosed are the following:

- NSTS credentialing poster – This poster highlights some of the benefits to using the online system and lets you know where to go to sign up. The posters come in English and Spanish. They will make a perfect addition to your break room or office!
- NSTS magnet with new fax line – Our fax line number has changed. We've developed these magnets with the phone number, new fax number, and email address of the Help Desk. Keep this handy magnet on your file cabinet or refrigerator and you'll never forget who to call with questions about NSTS.

Please continue to visit the NSTS Blog and NSTS website to keep up to date on NSTS news and issues.

Sincerely,
