

4B Fuel Licensing Acceptance Criteria

4B.1 Introduction

A set of fuel licensing acceptance criteria has been established for evaluating fuel designs and for determining the applicability of generic analyses to these designs. Fuel design compliance with the fuel licensing acceptance criteria constitutes USNRC acceptance and approval of the fuel design for initial core and reload applications without specific USNRC review. [*The fuel licensing acceptance criteria are presented in Reference 4B-1. Any change to these criteria must have prior NRC review and approval.*]^{*}
