2012 Pressure Vessels & Piping Conference

*New Horizons in Global Pressure
Vessel and Piping Technology*

July 15–19, 2012

Sheraton Centre Toronto Hotel
Toronto, Ontario, Canada

Welcome to PVP 2012

Welcome to Toronto, Ontario, Canada for the 2012 ASME Pressure Vessels & Piping Conference. The PVP Conference is known to be the outstanding international technical forum for participants to further their knowledge-base through exposure to diverse engineering topics and dissemination of cutting-edge technology related to pressure vessel and piping technologies for the power and process industries. We look forward to fruitful technical exchanges between participants from Europe, Africa, the Middle East, Asia, the Americas and the Oceania Islands. Our Conference continues to shape the technology in the pressure vessel industry on a truly global basis.

The ASME Pressure Vessels & Piping Division is sponsoring this Conference. The ASME Nondestructive Evaluation (NDE) Engineering Division is also participating. This year, the Conference Technical Program contains over 600 technical papers, and presentations organized into more than 150 technical and panel discussion sessions, two tutorials, two special tutorials, and our outstanding Student Paper Competition. The NDE and Software Demonstration forums are also organized as part of our technical program.

Technical papers presented in this Conference are separated into tracks, according to their technical areas, and published in the Conference proceedings in the form of a CD-ROM.

A key component of every PVP Conference is the opportunity to socialize and make new friends—our Conference in Toronto offers several great possibilities. **A Day in Niagara** is our Monday tour event featuring an up-close look at the falls from the Maid of the Mist tour boat and lunch at a restaurant overlooking the falls. Monday evening we all meet at the **Conference-Wide Reception** that will be held in the Dominion Ballroom. The **City Tour of Toronto**, on Tuesday, includes a guided tour of Casa Loma—a 98-room castle residence—and an additional stop at the **Distillery District** for lunch and shopping. Wednesday's social highlight celebrates the international cultures represented at the Conference with an evening at the **Atlantis Pavilion**. The venue is perched on stilts over Lake Ontario and features fantastic views of the Toronto skyline. International dining and fun entertainment make this an event not to be missed.

OPENING CEREMONY and PLENARY SESSION *New Horizons in Global Pressure Vessel and Piping Technology*

The Conference opens on Monday, July 16, at 10:30 am, in the Dominion Ballroom. Representatives of the American Society of Mechanical Engineers will welcome the attendees. The first presentation will be delivered by Mr. Mark Elliott, Senior Vice-President and Chief Nuclear Engineer for Ontario Power Generation. The second presentation will be delivered by Mr. Terry Jamieson, Vice-President of the Technical Support Branch at the Canadian Nuclear Safety Commission.

Plenary Speaker

W. M. (Mark) Elliott, P.Eng.
 Ontario Power Generation

Nuclear Refurbishment at Ontario Power Generation

In 2016, Ontario Power Generation (OPG) will begin executing the mid-life Refurbishment of the Darlington Nuclear Plant. Darlington is a 4-reactor complex east of Toronto that began operation in 1991–1993. Its CANDU Reactor design has 480 Fuel Channels at its core. These Fuel Channels and other reactor components must be replaced at the 30 year mark to allow another 30 years of operation. Replacing these major reactor components is the biggest task but the plant as a whole will be updated. And this work will all be done while keeping at least two reactors in full operation. This will be a large multi-year project that’s already been extensively planned with more detailed preparations now underway.

Mr. Elliott will discuss the key factors in the path to success for the Refurbishment Project. Activities to define and fix the scope early included an Environmental Assessment, an Integrated Safety Review against modern Codes & Standards and a Component Condition Assessment. A full reactor mock up is being built to test the innovations in tooling and extensive plant inspections and walk downs are being done to minimize surprises. The work will be done using the Engineer, Procure, Construct (EPC) contracting model with the vendors fully engaged in the planning phase. OPG is also benchmarking the best practices of other Utilities currently doing nuclear refurbishment projects.

These and other sound Project Management techniques will be used by OPG to ensure success in this challenging phase of the CANDU Reactor life cycle.

W. M. (Mark) Elliott, P.Eng. is Senior Vice President, Nuclear Engineering, and Chief Nuclear Engineer for Ontario Power Generation (OPG). Mr. Elliott has held this position since December, 2010.

Prior to assuming this position, Mr. Elliott was Senior Vice President for the Pickering A Nuclear Station responsible for the operation of the two Pickering A units and the Safe Storage of the remaining two units.

Mr. Elliott has held various positions with OPG and its predecessor Ontario Hydro, including Senior Vice President, Inspection and Maintenance Services; Director, Station Engineering for Pickering B, Director; Training at Pickering; Director, Operations and Maintenance Support at Pickering; Authorized Shift Supervisor at both Pickering B and Darlington stations; and Unit Pair Manager for Units 1 & 2 at Darlington.

Mr. Elliott graduated from McMaster University in Engineering Physics (1978) and has been a Professional Engineer in the Province of Ontario since 1981.

Plenary Speaker

Mr. Terry Jamieson, MASc, P.Eng.

Canadian Nuclear Safety Commission

The Importance of Participation of Regulators at International Activities

The Canadian Nuclear Safety Commission (CNSC) regulates the use of nuclear energy and materials to protect the health, safety, and security of Canadians and the environment in Canada. The CNSC is committed to providing regulatory instruments that achieve clarity of its requirements and are aligned with the best international practices. Regulatory decisions are made based on staff recommendations derived from state-of-the-art information in science and technology acquired, in part, by staff participation at various international activities. This participation contributes to enhancing the staff's knowledge and to maintaining a high overall level of competence, to staying abreast of the latest developments in the science and engineering, to achieving mutual understanding among regulatory bodies and technical support organizations, and to building the organization's reputation as one of the world's best nuclear regulators. The knowledge acquired is used to develop and enhance our regulatory framework and, jointly with the industry, to continuously improve national standards in all technical areas of the nuclear industry and, subsequently, to ensure that existing nuclear facilities continue to operate safely and that new builds will be even safer. Moreover, the CNSC strategic R&D program takes into account various international research projects at which staff participates in order to maximize the benefits of the scientific outcome. Through its long and steady participation at scientific and technical events in the international nuclear arena sponsored by, but not limited to, the IAEA and OECD-NEA, we are recognized by our peers as an important contributor to the development and promotion of nuclear safety regulations. Since CNSC

participation is very broad, covering many topics, this presentation will focus only on those international activities which pertain to the Pressure Vessels & Piping Conference. Such activities are encompassing, just to count a few, the development and harmonization of the codes and standards for pressure retaining components, the seismic qualification of Structures, Systems and Components (SSCs), fracture mechanics, periodic in-service inspections, aging management and material degradation. This presentation will also highlight how the recent lessons learned from the Fukushima accident have been integrated within these activities.

Mr. Terry Jamieson, MASc, P.Eng., is the Vice-President of the Technical Support Branch at the Canadian Nuclear Safety Commission. In this position he directs a staff of over 300 engineers and scientists.

He has over 31 years of experience in the Canadian nuclear safety and environmental industries, and has held technical and management positions in the areas of radiation protection, environmental protection, nuclear security and safeguards, and safety assessment. He holds a designation as a Consulting Engineer (PEO), specializing in radiological engineering.

Mr. Jamieson began his career as a nuclear design engineer at Ontario Hydro in 1981. More recently, from 1989 to 2007, he worked at Science Applications International Corporation, where he rose to the position of Chief Operating Officer and Vice-President for Canada. He joined the CNSC in 2007.

He has authored many technical publications and was a recipient of an American Nuclear Society Best Paper Award in 1996. The Canadian Nuclear Society awarded him the J.S. Hewitt Team Achievement Award in 2000 for the creative conceptualization and innovative application of a thermal neutron-activation-based system for detecting non-metallic land mines. In 2010, he was made a Fellow of the Engineering Institute of Canada.

HONORS and AWARDS LUNCHEON

The ASME PVP Division Honors and Awards Luncheon, during which all Division and selected ASME Society awards are presented, will be held on Wednesday, July 18, at 12:30 pm, in the Osgoode Ballroom, on the Lower Concourse. The top PVP Division award, the ASME S. Y. Zamrik PVP Medal, will be presented to Dr. M. K. Au-Yang.

ASME S. Y. Zamrik PVP Medal Recipient

M. K. Au-Yang, Ph.D., P.E.

Consultant

Dr. M. K. Au-Yang is one of the most internationally renowned engineers in the field of flow induced vibrations and is this year's recipient of the ASME

S. Y. Zamrik Pressure Vessels & Piping Medal. Following the completion of his formal education in both mechanical engineering and physics at UC Berkley in the late 1960's, M. K. found his way across country to Lynchburg, VA, where he spent the vast majority of his professional career with various divisions of the Babcock & Wilcox Company and Framatome Technologies advancing the state of the art in flow induced vibrations. During an esteemed career that spanned a period in excess of 43 years, M. K. also served as the PVPD Fluid-Structures Interaction Technical Committee Chair, the Honors & Awards Committee Chair, and the PVP Division Chair. Dr. Au-Yang also served two separate multi-year terms as an Associate Editor of the ASME Journal of Pressure Vessel Technology.

Through M. K.'s contributions, the nuclear power industry has benefited directly from his publications and direct leadership on numerous international panels and committees, including his work on U. S. Nuclear Regulatory Guidelines pertaining to equipment vibrations. With his unique technical expertise, Dr. Au-Yang published more than 50 technical papers, authored the text entitled, "Flow-Induced Vibration for Power and Process Plant Components" (ASME Press), received two U.S. patents, and also edited/co-edited 26 ASME publications. In addition, Dr. Au-Yang also conducted several tutorials and short courses on his expert areas at a PVPD Conference and for the ASME Continuous Education Institute. Dr. Au-Yang also contributed significantly to various ASME Codes dealing with flow-induced vibration analysis and with heat exchanger testing. During his extensive service to the PVP Division, M. K. exemplified and demonstrated his devotion toward the Division. Dr. Au-Yang is known throughout our PVP family as always providing leadership with integrity.

WORKSHOPS and TUTORIALS

Tutorials and Workshops offer both the experienced and early career engineers excellent opportunities to refresh their knowledge and to venture into specific technical areas outside their expertise.

Special Tutorial: A special tutorial is a two-hour Conference session, held on Sunday afternoon. The session leader will make available the necessary presentation material.

Technical Tutorials: These tutorials are approximately four hours in length. Technical tutorials fill two consecutive Conference session blocks, and are integrated into the Conference session schedule. Admission to the tutorials and workshops is free for Conference Registrants. At each technical tutorial, attendees may purchase a copy of the Tutorial Notes; the charge is set as low as possible based on the cost of production. For 2012, the notes for the Technical Tutorials may be purchased for \$35.00 CAD each at the tutorial sessions. The Technical Tutorial notes will be available in either printed or electronic format.

Each attendee will receive a Certificate of Attendance, as proof that the attendee has participated in the two-hour Special Tutorial, or the four-hour Technical Tutorial.

PVP Division will not assign Continuing Education Units (CEUs) on these certificates. However, attendees may negotiate CEU credits with their respective licensing boards.

An outline of the tutorial sessions for the 2012 PVP Conference is presented below.

Process and Benefits of ASME Pressure Technology Codes & Standards Development

Bills Bees, Consulting Engineer, Wadsworth, OH; and, Guido Karcher, Chair of the Board on Pressure Technology Codes & Standards, Little Egg Harbor, NJ

Have you ever wondered how all of the Codes & Standards stuff that ASME produces happens? In addition to the advantages and benefits that ASME members gain from membership in the PVP Division and attendance and participation in the ASME Pressure Vessel and Piping Conference, ASME can also offer additional benefits to folks with these interests in the area of Codes & Standards development. In this workshop, we will:

- Explain the overall process used in development of ASME Codes & Standards, and specifically those in the area of Pressure Technology Codes & Standards;
- Describe the consensus process used in the Codes & Standards development process and the ANSI approval process;
- Explore the benefits to participants in ASME Codes & Standards development activities;
- Discuss the various types of participation in the Codes & Standards Committees, qualifications, and the expectations of the participants;
- Explore the relationship between ASME Pressure Vessels & Piping Division and ASME Codes & Standards;
- Explain the overall structure of the Committee Structure under the Board on Pressure Technology Codes & Standards and their areas of

Coffee Breaks and Refreshments

Coffee and refreshments are available throughout the week in the Civic Foyer (Second Floor). This hub of activity features the coffee breaks, guest activity information area, and registration. Note that the NDE and Software forum booths will be located in both the Civic Foyer (Second Floor) and the Essex Foyer (Mezzanine Level).

responsibilities; and

- Discuss some of the emerging areas in Pressure Technology and the ones currently seeking participants.

One of ASME's most valuable assets is our relationships with the volunteer members who serve on our Codes & Standards committees. It is ASME's policy to afford all persons with direct and material interest, without regard to country of citizenship or residency, the opportunity to participate in the ASME Codes & Standards development process. Membership on a committee normally represents you as an individual, rather than as a representative of your employer or another organization.

The last part of the session will be an open question and answer session to discuss any questions you may have. So come and ask the experts about another way to get involved with ASME.

Civic Ballroom S., Second Floor

Use of CFD in Design

Sean McGuffie, Mike Porter, and Tommy Hirst, Porter McGuffie, Inc., Lawrence, KS

This tutorial will provide the design engineer with an understanding behind the fundamental concepts related to successfully performing CFD analyses, and how they can be incorporated into design processes. The tutorial will begin with an overview of the CFD process, including:

- A general outline of the Navier-Stokes equations and their solution;
- The selection of proper computational domains;
- Basic requirements for computational grids;
- Selection of proper boundary conditions; and
- Turbulence models required for basic solutions.

These preliminary concepts will then be reinforced through the solution of a "simple" CFD model. During the solution of the problem the concepts of establishing solution monitors and using them to monitor convergence will be discussed.

Next, more advanced topics/physics models that can be incorporated into CFD analyses will be discussed. These will include:

- The incorporation of the energy equation for thermodynamics analyses, including radiation models;
- The use of multi-component flows, including—
 - Multi-species
 - Volume of fluid
 - Eulerian methods
 - Lagrangian methods, and
 - Reacting flows
- Non-approximate transient methods such as DES and LES.

Industrial examples will be shown to demonstrate the advanced topics.

Tuesday, July 17, 8:30 am – 12:15 pm

Civic Ballroom S., Second Floor

Practical Piping Vibration

Charles Becht IV, Becht Engineering Company, Inc., Liberty Corner, NJ

This tutorial provides an overview of a wide variety of causes of piping vibration from the point of view of an engineer that must identify the cause of vibration, determine if vibration is excessive, and correct the problem if it is. It provides a background on fundamental causes of piping vibration and how to identify source of vibration, rules of thumb and simplified methods for evaluating vibration severity, and methods of treatment. A wide variety of causes of vibration are covered in order to enable the participant to properly evaluate the variety of piping vibration problems that can occur in piping systems. The causes of vibration, where possible, are discussed with respect to very basic energy and momentum principles that enable the participant to understand what is happening within and to the piping system. Screening and simple vibration limits are provided.

A Day in Niagara

Monday, July 16, 8:30 am – 3:30 pm

A trip to Southern Ontario would not be complete without a visit to this most beautiful of the world's wonders! The Niagara region boasts some of the world's most beautiful scenery.

In the Niagara area, a detailed tour will begin, outlining the historical, cultural, and geographical highlights of the region. Board the Maid of the Mist and experience the majesty of the Falls close up. Lunch will be provided in a restaurant overlooking the Falls—a wonderful way to relax. Afterwards, browse through the gift shops or simply just enjoy the view.

The return to Toronto may, if time permits, be routed through Niagara-on-the-Lake. Niagara-on-the-Lake is one of the oldest settlements in Ontario, famous for the War of 1812 between Canada and the United States. The town has been beautifully restored to depict its heritage. En route, the tour follows the Niagara River, passes the Whirlpool Rapids, as well as the historic sites of the Brock Monument and Laura Secord House.

Tickets: \$98 CAD per Person/\$69 Children 12 and younger

Toronto City Tour with Stop at Casa Loma and the Distillery Tuesday, July 19, 9:00 am – 3:00 pm

On the way to Casa Loma this "get acquainted" tour includes views of such famous attractions as Nathan Phillips Square, Old and New City Halls, Queen's Park, the four city block shopping complex Eaton Centre, the Victorian splendor of Cabbagetown, Allan Gardens, Queen's Park, Royal Ontario Museum and the trendy Yorkville area. Next, visit one of the most popular tourist attractions in Toronto—Casa Loma. Sir Henry Pellatt built this castle between 1911 and 1914, with every painstaking attempt to replicate the homes of European royalty. The childhood dream of his took three years and \$3.5 million to complete. The 98-room creation includes gold plated bathroom fixtures, a pipe organ larger than those in many cathedrals, underground tunnels, and secret passageways.

On the way to the last stop, you will pass the Annex, Chinatown, Art Gallery of Ontario, Roy Thomson Hall, Rogers Centre and St. Lawrence Market and Hall. Your last stop will be in Toronto's Distillery District. Once the largest distillery in the world, it was founded in 1832 by William Gooderham and James Worts. The Distillery District now includes 44 heritage buildings housing boutiques, galleries, art studios, cafes, bistros, and other retail shops. This is also an often-used venue where movies like *Chicago*, *The Recruit*, *Cinderella Man*, and many more of your favorite movies were filmed. Enjoy lunch on your own at one of the restaurants or cafes that The Distillery District has to offer.

Tickets: \$52 CAD per person/\$45 Children 12 and under

CONFERENCE INFORMATION

Technical Sessions and Programs

All technical sessions will be held on either the second floor or the mezzanine level of the Sheraton Centre Toronto Hotel. Each room will be equipped with an LCD projector that can be connected to a personal computer for electronic presentations (e.g., Microsoft PowerPoint). Please note that ASME will not provide personal computers, 35-mm slide projectors, VCRs, or overhead projectors. Personal computers are the responsibility of the session developer, or presenter. It is strongly recommended that authors provide their materials to the session developer at the Authors' Breakfast, so that all the papers in a session can be loaded onto a single computer. Authors are recommended to have their presentations on a flash (pen) drive, in the event that compatibility problems occur between their computers and the LCD.

The location of the session rooms is shown in the Hotel Floor Plan of this program.

Rudy Scavuzzo Student Paper Symposium and 20th Annual Student Paper Competition

Mon., July 16th, 2:00 pm – 5:45 pm
