Subject:	Wolf Creek Generating Station (TAC No. ME8569) - Acceptance Review re: TSTF 510, "Revision to Steam Generator Program Inspection Frequencies"
Date:	Wednesday, August 15, 2012 12:10:03 PM

Dear Mr. Wideman:

By letter dated April 26, 2012, (ADAMS Accession No. ML12124A339), the Wolf Creek Nuclear Operating Corporation (WCNOC) requested to revise the Technical Specification (TSs) to adopt TSTF-510, "Revision to Steam Generator Program Inspection Frequencies and Tube Sample Selection," using the consolidated line item improvement program (CLIIP) at the Wolf Creek Generating Station.

The purpose of this e-mail is to provide the final results of the NRC staff's acceptance review of this request. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed change. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

The NRC staff has reviewed your application and concluded that there appears to be sufficient technical information, both in scope and depth, to enable the staff to proceed with its detailed technical review and make an independent assessment regarding the acceptability of the LAR in terms of regulatory requirements and the protection of public health and safety and the environment.

If additional information is needed for the staff to complete its technical review, you will be advised by separate correspondence.

Should you have any questions regarding this review, please contact me at (301) 415-2767.

Sincerely,
Brian Benney
Plant Licensing Branch IV
Division of Operating Reactor Licensing
Office of Nuclear Reactor Regulation
