Subject: Prairie Island NGP Units 1 and 2 - Acceptance Review of LAR to Revise Technical Specifications Associated with Unit 2 Steam Generator Replacement and Adopt TSTF-510 (TAC Nos. ME9254 and ME9255)

By letter dated July 25, 2012 (Agencywide Documents Access and Management System (ADAMS) Accession No. ML12207A522), Northern States Power Company - Minnesota, doing business as Xcel Energy, submitted a license amendment request (LAR) to revise the Technical Specifications Associated with Unit 2 Steam Generator Replacement and Adopt TSTF-510, "Revision to Steam Generator Program Inspection Frequencies and Tube Sample Selection," for Prairie Island Nuclear Generating Plant, Units 1 and 2. The purpose of this email is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review of the LAR. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

The NRC staff has reviewed your application and concluded that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed license amendment in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. If additional information is needed, you will be advised by separate correspondence.

If you have any questions, please contact me.
