Dear Chairwoman Macfarlane,

Regarding the scoping process for the Waste Confidence Environmental Impact Statement (Docket ID NRC-2012-0246), please withdraw the relevant Federal Register Notice and correct its legal deficiencies, suspending this proceeding until you have done so. Specifically, the lack of a proposed action, and the lack of alternatives to the proposed action, violate the National Environmental Policy Act, as well as NRC's own regulations (10CFR51.27(a)(2)). The safety and security risks of storing irradiated nuclear fuel at reactor sites in pools and dry casks are too great for this scoping process to go forward, given NRC's legal errors.

Thank you

Elizabeth G. Butler

1110 S. Alves Street

Henderson KY 42420

Subject: Play by rules NRC!

Dear Chairwoman Macfarlane,

I urge you, please, to make the Nuclear Regulatory Commission play by the rules.

A federally chartered commission must be scrupulous in its application of, and respect for, all laws, rulings, and protocols established that delineate its mandates.

Regulatory actions by the NRC will be measured in this way -- as acts done within a set of legally defined regulatory, monitoring, inspection, and enforcement duties -- and will not be measured by how it serves the commercial interests or shareholders of private and public utilities.

Regarding the scoping process for the Waste Confidence Environmental Impact Statement (Docket ID NRC-2012-0246), please withdraw the relevant Federal Register Notice and correct its legal deficiencies, suspending this proceeding until you have done so. Specifically, the lack of a proposed action, and the lack of alternatives to the proposed action, violate the National Environmental Policy Act, as well as NRC's own regulations (10CFR51.27(a)(2)). The safety and security risks of storing irradiated nuclear fuel at reactor sites in pools and dry casks are too great for this scoping process to go forward, given NRC's legal errors.

Thank you for standing up for the law, and for keeping the NRC on track with what we citizens require: common-sense and consistent application of those laws. Our safety and security are at stake!

Subject: Concern about Waste Notice

[Dear Chairwoman Macfarlane,

Regarding the scoping process for the Waste Confidence Environmental Impact Statement (Docket ID NRC-2012-0246), please withdraw the relevant Federal Register Notice and correct its legal deficiencies, suspending this proceeding until you have done so. Specifically, the lack of a proposed action, and the lack of alternatives to the proposed action, violate the National Environmental Policy Act, as well as NRC's own regulations (10CFR51.27(a)(2)). The safety and security risks of storing irradiated nuclear fuel at reactor sites in pools and dry casks are too great for this scoping process to go forward, given NRC's legal errors.

I am very interested in avoiding the looming danger of radiation in an American earthquake or storm which prevents the cooling of stored fuel. Having fuel storage on top of reactors where any loss of pumping power immediately exposes dangerous fuel rods. Most of our nuclear facilities are on coastlines or rivers that present the danger of massive contamination of water. We see from Japan how dangerous it really is. Too dangerous to continue.

Please correct the legal deficiencies and also recognize the unacceptable risks.

Subject: Nuclear waste

Hi, Madam Chairwoman, my name is Judy Kulp. I wanted to recount to you who I am. I am a nobody, a retired Special Education teacher and between working 2 jobs, going to college and raising my daughter as a single mother, I was and still am an antinuclear activist. Growing up in the shadow of Salem Nuclear power plant, built by uneducated oafs that barely made it through my high school, I became fearful of nuclear facilities from an early age. I've protested from Cape May, NJ to Yucca Flats, Richland, WA to Washington, DC and I am tired. Stop this nuclear nonsense as we all know there is no safe handling of this stuff. There are no safe places to store the waste and, more importantly, nobody who is not economically invested in this wants this. Solar and wind, along with geothermal can be enough. recently, as we were dealing with Hurricane Sandy, Oyster Creek went on alert. We narrowly missed the full wrath as did Oyster Creek and the Salem fleet. Make it all stop. You have the power! No one should die to heat their homes and watch a little tv. Thanks, Judy Kulp, 503 Rosehill Pkwy., NJ 08204.

Subject: Science and Waste and The Environment

Ms. Macfarlane -

It sure would be nice to have a little faith in our government when it came to doing things like evaluating drugs fairly, protecting food quality, investigating on climate change and similar.

But few of those things tend to have the same kinds of long term impacts as the regulation of nuclear waste.

This was not some high school science project, from what I read. It SHOULD have been a reasonable scientific study of the issues and problems and alternatives.

I have white wash in my garage. I do not need to see it from a government agency.

Wasn't this something that should have gotten some real study and critical thinking?

Please scrap the existing Waste "Confidence" Environmental Impact Study and produce something that would be a little less embarrassing to those of us who have some education in science.

Be a proud American: Cultivate willful ignorance and denial.

Ms. Chairman: I believe nuclear power is already dead, just being given mouth-to-mouth and being zapped with the paddles by a desperate anachronism of an industry terrified of losing their cash cow. THERE IS NO SINGLE THING TO RECOMMEND IT, and the money wasted could put us on a path to actual survival on planet Earth, if anyone is interested. The planet is already contaminated with radiation essentially forever.
Further support for deadly fission is nothing if not insanity.

Subject: nuclear waste

Dear Chairwoman Macfarlane,

Regarding the scoping process for the Waste Confidence Environmental Impact Statement (Docket ID NRC-2012-0246), please withdraw the relevant Federal Register Notice and correct its legal deficiencies, suspending this proceeding until you have done so. Specifically, the lack of a proposed action, and the lack of alternatives to the proposed action, violate the National Environmental Policy Act, as well as NRC's own regulations (10CFR51.27(a)(2)). The safety and security risks of storing irradiated nuclear fuel at reactor sites in pools and dry casks are too great for this scoping process to go forward, given NRC's legal errors.

Sincerely,

Erik Roth

Subject: Waste Confidence Scoping violates NEPA

Dear Chairwoman Macfarlane,

The scoping process for the Waste Confidence Environmental Impact Statement (Docket ID NRC-2012-0246) is premature and, to my understanding, not following clearly defined NEPA procedures. Specifically, the lack of a proposed action, and the lack of alternatives to the proposed action, violate the National Environmental Policy Act, as well as NRC's own regulations (10CFR51.27(a)(2)). They also make it impossible to comment specifically on an unknown proposal. The safety and security risks of storing irradiated nuclear fuel at reactor sites in pools and dry casks are too great for this scoping process to go forward, given NRC's legal errors. Please withdraw the relevant Federal Register Notice and correct its legal deficiencies, suspending the comment gathering process until you have done so.

It is my personal belief that, given the natural disaster-triggered events at Fukushima and the vulnerabilities of many of our reactors in this country, located on faults and near rising sea & river level flood zones under rapidly changing climatic conditions, the precautionary principle would halt any additional production of nuclear waste until the unsolved problem of what to do with it is resolved.

Thank you for your thoughtful consideration.

Sincerely,

Sally Shaw

--
November 8, 2012

U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

SUBJECT: Notice of Intent to Prepare Waste Confidence EIS

Dear Commissioners:

On behalf of twenty five organizations and individuals who seek a meaningful opportunity to participate in the environmental review process the NRC has initiated in response to the U.S. Court of Appeals' decision in State of New York v. NRC, 681 F.3d 471 (D.C. Cir. 2012)1, we write to request you withdraw the "Request for comments on the notice of intent to prepare and

(sic) environmental impact statement and notice of public meetings"
("Notice"), published in the

Federal Register on October 25, 2012 (77 Fed. Reg. 65,137). The Notice should be withdrawn because it fails to satisfy two of the most basic requirements of U.S.

Nuclear Regulatory

Commission ("NRC") regulations for notices of intent to publish an environmental impact statement ("EIS"). As a result, the notice fails to give the public sufficient information on which to develop comments on the appropriate scope of the EIS proposed by the NRC.

According to the Notice, the purpose of the proposed EIS is to respond to the U.S. Court of Appeals' decision in State of New York. To that end, the Notice briefly describes the types of environmental impacts that it proposes to evaluate. The Notice fails, however, to provide two pieces of information required by NRC regulation 10 CFR § 51.27(a)(2) for a Notice of Intent to prepare an EIS: (a) a "description of the proposed action" and (b) "to the extent sufficient information is available, possible alternatives." Instead, the NRC asserts that the scoping process will be used, among other things, to "[d]efine the proposed action that is to be the subject of the EIS." 77 Fed. Reg. at 65,138. Under section 51.27(a)(2), however, it is the NRC's responsibility in the first instance to identify the proposed action in the scoping notice.

Otherwise, commenters on the scoping notice will have no basis for commenting on the scope of alternatives to the proposed action or the impacts of the proposed action that must be considered.

These organizations and individuals are: Beyond Nuclear, Blue Ridge Environmental Defense League, Center for a Sustainable Coast, Citizens Allied for Safe Energy, the Ecology Party of Florida, Friends of the Coast, Friends of the Earth, Georgia Women's Action for New Directions, Hudson River Sloop Clearwater, Institute for Energy and Environmental Research, Dan Kipnis, Missouri Coalition for the Environment, Natural Resources Defense Council, National Parks Conservation Association, NC Waste Reduction and Awareness Network, Nevada Nuclear Waste Task Force, New England Coalition, Northwest Environmental Advocates, Nuclear Information and Resource Service, Mark Oncavage, Physicians for Social Responsibility, Riverkeeper, the SEED Coalition, San Luis Obispo Mothers for Peace, and Southern Alliance for Clean Energy.

In the Notice, the NRC gives no hint of what is the agency action that creates the risk of spent fuel storage environmental impacts, and thus requires commenters to guess at the action.

Moreover, what little factual information is presented in the Notice is likely to mislead commenters into viewing the proposed action and its alternatives as some combination of methods for storing spent fuel. Such a truncated scope of alternatives would be far too narrow to satisfy NEPA because it would not address the original agency action that causes the production of spent reactor fuel and its impacts: the licensing of nuclear reactors. Therefore the scoping process would not lead to any analysis of the most obvious alternative for the avoidance or mitigation of spent fuel storage impacts: the cessation of reactor licensing.

Without a clear description of the proposed action and its most obvious alternative, the Notice is fatally deficient. The Notice therefore should be withdrawn and republished with a clear description of the NRC action that leads to spent fuel storage impacts: licensing of nuclear reactors. It should also identify the no-action alternative: the cessation of licensing and relicensing, which would halt further production of spent fuel.

If the NRC does not withdraw the scoping notice, we believe that to be consistent with the requirements of Section 51.47(a)(2), the NRC must re-publish a second scoping notice after this commenting period expires, identifying the proposed action and alternatives of which the NRC is aware, and seeking further comment.

--

Sincerely,
William Hofferford

Sent: Friday, November 16, 2012 8:27 PM
To: CHAIRMAN Resource
Subject: Nuclear waste

On Nov. 14th, the U.S. Nuclear Regulatory Commission (NRC) held public comment hearing sessions regarding its court-ordered environmental assessment (EA) on its Nuclear Waste Confidence Decision and Rule. Critics have dubbed this NRC's "Nuke Waste Con Game," for it has been used by the agency to block challenges to reactor licensing for decades, if environmental groups or concerned citizens raise questions about the safety or security of on-site storage of high-level radioactive waste at atomic reactors. But on June 8th, a coalition of states and environmental groups prevailed at the D.C. Circuit Court of Appeals, when a panel of federal judges ruled that NRC must perform an environmental impact statement (EIS) to document its claimed confidence that irradiated nuclear fuel can be stored safely and securely at reactor sites for 120 years.

On Nov. 8th, the same environmental attorneys who won the court victory wrote NRC Chairwoman Allison Macfarlane (pictured above left), urging her to withdraw NRC's Federal Register Notice on the EA, due to its violations of the National Environmental Policy Act (NEPA), as well as NRC's own regulations (specifically, 10CFR51.27(a)(2)). Critically lacking from the EA Notice are a description of the proposed action, as well as alternatives to the proposed action. A number of environmental groups, including Beyond Nuclear, cited that letter yesterday, calling for these legal violations to be corrected, and for this proceeding to be suspended in the meantime.

Please urge NRC Chairwoman Macfarlane to withdraw the Federal Register Notice, suspend this proceeding, and correct the legal errors. Here is language you can use:

[Dear Chairwoman Macfarlane,

Subject: Docket ID NRC-2012-0246

Dear Chairwoman Macfarlane,

Regarding the scoping process for the Waste Confidence Environmental Impact Statement (Docket ID NRC-2012-0246), please withdraw the relevant Federal Register Notice and correct its legal deficiencies, suspending this proceeding until you have done so. Specifically, the lack of a proposed action, and the lack of alternatives to the proposed action, violate the National Environmental Policy Act, as well as NRC's own regulations (10CFR51.27(a)(2)). The safety and security risks of storing irradiated nuclear fuel at reactor sites in pools and dry casks are too great for this scoping process to go forward, given NRC's legal errors. Thank you for your diligent attention to this matter.

Sincerely,

James Cunningham

The nuclear disaster in Fukushima conclusively demonstrates the unparalleled disasters awaiting us if we continue to store spent fuel in precarious and difficult to cool locations. No amount of cost savings for consumers or energy security can justify taking such risks. The NRC's willingness to try to rush through flawed and dangerous regulations to pad the coffers of the nuclear energy industry at the expense of the safety of the whole world is utterly craven and unacceptable. Please come to your senses and do the right thing.

Subject: RADIOACTIVE WASTE SOLUTIONS

Our non-profit Farallon Project has data on two technical solutions to radioactive waste. I have been involved in that since the 80's, when we stopped the Navy from dumping old nuke subs into the ocean.

The first is Seacrete, a former patented invention that uses seawater and solar energy to create a material which can safely encapsulate radwaste anywhere! The second is Transmutation, invented at Arizona State University, that can change any radwaste into Iodine which is active for only 30 days!

I have worked with Sen. Boxer years ago on this, relevant to 50,000 barrels of radwaste that were dumped into the ocean off San Francisco.

I have contact with two millionaires who gave donations for our project, and could be into a possible work with your efforts. Please RSVP, Conrad Golich, 480/423-6857. Thankyou (:<)

Subject: Nuclear Waste Disposal - immediate action

Dear Chairwoman Macfarlane,

I would like, as a former particle physicist and as a Franciscan priest, to endorse the following comments from the "Beyond Nuclear" team. I share their concern, first hand. Back in the 1970's here in the UK, disposal of high-level nuclear waste by means of vitrification and deep underground storage was being rushed through. No-one seemed to recognise the vast time scales involved, nor the pro-active, de-vitrifying nature of the waste towards its containment, nor the geology of long-term water seepage. Thank God - and I do thank God - it was abandoned. The problem remains, OK, for us in the UK: but by waiting, it has not become an intractable nightmare for our children's children's children. Thank you. This is their letter, which I strongly endorse and affirm: -

Regarding the scoping process for the Waste Confidence Environmental Impact Statement (Docket ID NRC-2012-0246), please withdraw the relevant Federal Register Notice and correct its legal deficiencies, suspending this proceeding until you have done so. Specifically, the lack of a proposed action, and the lack of alternatives to the proposed action, violate the National Environmental Policy Act, as well as NRC's own regulations (10CFR51.27(a)(2)). The safety and security risks of storing irradiated nuclear fuel at reactor sites in pools and dry casks are too great for this scoping process to go forward, given NRC's legal errors.

Yours most sincerely,

Edmund ssf

Subject: EIS is necessary!

Dear Chairwoman Macfarlane,

I feel it is absolutely necessary that the NRC perform an environmental impact statement (EIS) to document its claimed confidence that irradiated nuclear fuel can be stored safely and securely at reactor sites for 120 years. Regarding the scoping process for the Waste Confidence Environmental Impact Statement (Docket ID NRC-2012-0246), please withdraw the relevant Federal Register Notice and correct its legal deficiencies, suspending this proceeding until you have done so. Specifically, the lack of a proposed action, and the lack of alternatives to the proposed action, violate the National Environmental Policy Act, as well as NRC's own regulations (10CFR51.27(a)(2)). Subject: Federal Register Notice

Dear Chairwoman Macfarlane,

We have significant misgivings about the scoping process for the Waste Confidence Environmental Impact Statement (Docket ID NRC-2012-0246). We urge you to withdraw the relevant Federal Register Notice so that its legal deficiencies can be corrected. This proceeding should be suspended until you have done so. Specifically, the lack of a proposed action, and the lack of alternatives to the proposed action, violate the National Environmental Policy Act, as well as NRC's own regulations (10CFR51.27(a)(2)). The safety and security risks of storing irradiated nuclear fuel at reactor sites in pools and dry casks are too great for this scoping process to go forward, given NRC's legal errors.

Since the damage from Hurricane Sandy has been examined, critical problems with potential flooding of pools and even dry casks causing spread of contaminated flood waters to spread uncontrollably calls into question the criteria used to certify safety/risks of these safety measures.

Sincerely,

Joan and Wallace MacDonald
