1. Pre-Examination

I acknowledge that I have acquired specialized knowledge about the **NRC licensing examinations** scheduled for the week(s) of 10/1 → 10/12/12 as of the date of my signature. I agree that I will not knowingly divulge any information about these examinations to any persons who have not been authorized by the NRC chief examiner. I understand that I am not to instruct, evaluate, or provide performance feedback to those applicants scheduled to be administered these licensing examinations from this date until completion of examination administration, except as specifically noted below and authorized by the NRC (e.g., acting as a simulator booth operator or communicator is acceptable if the individual does not select the training content or provide direct or indirect feedback). Furthermore, I am aware of the physical security measures and requirements (as documented in the facility licensee's procedures) and understand that violation of the conditions of this agreement may result in cancellation of the examinations and/or an enforcement action against me or the facility licensee. I will immediately report to facility management or the NRC chief examiner any indications or suggestions that examination security may have been compromised.

2. Post-Examination

To the best of my knowledge, I did not divulge to any unauthorized persons any information concerning the NRC licensing examinations administered during the week(s) of 10/1 and 10/12/12. From the date that I entered into this security agreement until the completion of examination administration, I did not instruct, evaluate, or provide performance feedback to those applicants who were administered these licensing examinations, except as specifically noted below and authorized by the NRC.

NOTES:

Facility: R.E. Ginna		Date of Examination: 10/1/12		Operating Test Number: 2012 N-1	
1. General Criteria		Initials			
		a	b*	c#	
a.	The operating test conforms with the previously approved outline; changes are consistent with sampling requirements (e.g., 10 CFR 55.45, operational importance, safety function distribution).	RL	JF	RL	
b.	There is no day-to-day repetition between this and other operating tests to be administered during this examination.	RL	JF	B	
c.	The operating test shall not duplicate items from the applicants' audit test(s). (see Section D.1.a.)	RL	JF	B	
d.	Overlap with the written examination and between different parts of the operating test is within acceptable limits.	RL	JF	RL	
e.	It appears that the operating test will differentiate between competent and less-than-competent applicants at the designated license level.	RL	JF	B	
2. Walk-Through Criteria		--	--	--	
a.	Each JPM includes the following, as applicable: •initial conditions •initiating cues •references and tools, including associated procedures •reasonable and validated time limits (average time allowed for completion) and specific designation if deemed to be time-critical by the facility licensee •operationally important specific performance criteria that include: –detailed expected actions with exact criteria and nomenclature –system response and other examiner cues –statements describing important observations to be made by the applicant –criteria for successful completion of the task –identification of critical steps and their associated performance standards –restrictions on the sequence of steps, if applicable	RL	JF	RL	
b.	Ensure that any changes from the previously approved systems and administrative walk-through outlines (Forms ES-301-1 and 2) have not caused the test to deviate from any of the acceptance criteria (e.g., item distribution, bank use, repetition from the last 2 NRC examinations) specified on those forms and Form ES-201-2.	RL	JF	RL	
3. Simulator Criteria		--	--	--	
The associated simulator operating tests (scenario sets) have been reviewed in accordance with Form ES-301-4 and a copy is attached.		RL	JF	RL

QUALITATIVE ATTRIBUTES				Initials			
				a	b*	c#	
1.	The initial conditions are realistic, in that some equipment and/or instrumentation may be out of service, but it does not cue the operators into expected events.			RL	gg	Ro	
2.	The scenarios consist mostly of related events.			RL	gg	B	
3.	Each event description consists of •the point in the scenario when it is to be initiated •the malfunction(s) that are entered to initiate the event •the symptoms/cues that will be visible to the crew •the expected operator actions (by shift position) •the event termination point (if applicable)			RL	gg	B	
4.	No more than one non-mechanistic failure (e.g., pipe break) is incorporated into the scenario without a credible preceding incident such as a seismic event.			RL	gg	B	
5.	The events are valid with regard to physics and thermodynamics.			RL	gg	Ro	
6.	Sequencing and timing of events is reasonable, and allows the examination team to obtain complete evaluation results commensurate with the scenario objectives.			RL	gg	B	
7.	If time compression techniques are used, the scenario summary clearly so indicates. Operators have sufficient time to carry out expected activities without undue time constraints. Cues are given.			RL	gg	B	
8.	The simulator modeling is not altered.			RL	gg	B	
9.	The scenarios have been validated. Pursuant to 10 CFR 55.46(d), any open simulator performance deficiencies or deviations from the referenced plant have been evaluated to ensure that functional fidelity is maintained while running the planned scenarios.			RL	gg	Ro	
10.	Every operator will be evaluated using at least one new or significantly modified scenario. All other scenarios have been altered in accordance with Section D.5 of ES-301.			RL	gg	B	
11.	All individual operator competencies can be evaluated, as verified using Form ES-301-6 (submit the form along with the simulator scenarios).			RL	gg	B	
12.	Each applicant will be significantly involved in the minimum number of transients and events specified on Form ES-301-5 (submit the form with the simulator scenarios).			RL	gg	B	
13.	The level of difficulty is appropriate to support licensing decisions for each crew position.			RL	gg	B	
<b>Target Quantitative Attributes (Per Scenario; See Section D.5.d)</b>				<b>Actual Attributes</b>			
1.	Total malfunctions (5-8)			7 / 5 / 5		RL gg Ro	
2.	Malfunctions after EOP entry (1-2)			3 / 2 / 1		RL gg Ro	
3.	Abnormal events (2-4)			2 / 2 / 3		RL gg Ro	
4.	Major transients (1-2)			1 / 1 / 1		RL gg Ro	
5.	EOPs entered/requiring substantive actions (1-2)			1 / 1 / 1		RL gg Ro	
6.	EOP contingencies requiring substantive actions (0-2)			1 / 1 / 1		RL gg Ro	
7.	Critical tasks (2-3)			3 / 2 / 2		RL gg Ro

Instructions:

- Check the applicant level and enter the operating test number and Form ES-D-1 event numbers for each event type; TS are not applicable for RO applicants. ROs must serve in both the "at-the-controls (ATC)" and "balance-of-plant (BOP)" positions; Instant SROs must serve in both the SRO and the ATC positions, including at least two instrument or component (I/C) malfunctions and one major transient, in the ATC position. If an Instant SRO *additionally* serves in the BOP position, one I/C malfunction can be credited toward the two I/C malfunctions required for the ATC position.
- Reactivity manipulations may be conducted under normal or *controlled* abnormal conditions (refer to Section D.5.d) but must be significant per Section C.2.a of Appendix D. (\*) Reactivity and normal evolutions may be replaced with additional instrument or component malfunctions on a 1-for-1 basis.
- Whenever practical, both instrument and component malfunctions should be included; only those that require verifiable actions that provide insight to the applicant's competence count toward the minimum requirements specified for the applicant's license level in the right-hand columns.
