Subject: Strengthen or Close GE Reactors

As a public citizen, my impression is that the NRC has not made public safety a top priority. Otherwise, they would have already requested that nuclear facilities using Mark I and Mark II reactors install filtered containment vents or face closure of these facilities. A directive of this type follows naturally from what was learned lamentably during the Fukushima nuclear reactor accidents involving these same types of reactors.

Given the choice of installing the vents or closing the facilities, public utility users might prefer the second option, bringing their communities closer to safer, cleaner renewable energy generation.

Thank you.
