**Subject:** RE: Ross License Condition 12.11

Hi John:

One minor point with these changes is that they are included in the facility-specific conditions, which currently address issues that are truly unique to the Ross project. I would think that emergency response and transportation SOPs are standard to all similar facilities and would be included in the review required under 12.6. However, this is strictly a matter of how you organize requirements in the licenses you issue and is not a new requirement in my mind. My concern would be that this could imply that there are emergency or transportation issues that are unique to Ross, which is not the case.

Mike

**Subject:** Ross License Condition 12.11

Mike,

I wanted to let you know that I had to change license condition 12.11 in order to get OGC concurrence on part of the safety evaluation report.

The change is adding D and E:

- 12.11 Prior to the preoperational inspection, the licensee will provide to the NRC written standard operational procedures (SOPs) required for LC 10.4, which will include information to meet the following specific-site conditions:
- A) Development and sampling of low-yielding monitoring wells.
  - B) Inspection procedures for the CPP dewatering system.
  - C) A CPP effluent and environmental monitoring program (if not incorporated into the groundwater detection monitoring program required by LC 10.20).
  - D) An emergency response program that includes hazard assessment of all chemicals used at the facility including an accident analysis for those chemicals.
  - E) Transportation of licensed material outside of the License area.

This change should be included in your current evaluation of the license conditions.

Feel free to call 301-415-0697

John
