Jose:

Your application indicated that you no longer store your gauges at your facilities in Rio Piedras and Mayaguez that are currently listed on your license. We cannot remove these locations from your license until we receive documentation to confirm that these facilities are clear of any radioactive material and any radioactive contamination. This documentation can be either:

You perform radiological surveys of these facilities and provide the results of these surveys, including the instrumentation used to make these surveys and analysis of any wipe tests;

OR

You can review all the leak test records of your gauges while they were stored at these facilities. If your review indicates that that none of the gauges ever leaked radioactive material while it was stored there, then you can simply write to us confirming that you have reviewed the leak test records and these records did not indicate that the gauges ever leaked while they were stored there.

Please let me know as soon as possible if you want to retain these two facilities on your license and if not, provide the requested documentation so that they can be removed from your license. Thank you
