SUBJECT: PALISADES NUCLEAR PLANT
TEMPORARY INSTRUCTION 2515/186, "INSPECTION OF PROCEDURES
AND PROCESS FOR RESPONDING TO POTENTIAL AIRCRAFT THREATS";
INSPECTION REPORT NO. 05000255/2013404

Dear Mr. Vitale:

On January 25, 2013, the U.S. Nuclear Regulatory Commission (NRC) completed an inspection at your Palisades Nuclear Plant using Temporary Instruction 2515/186, "Inspection of Procedures and Processes for Responding to Potential Aircraft Threats." The enclosed inspection report documents the results of the inspection, which were preliminarily discussed on January 17, 2013, with you and other members of your staff. After discussing the results with the Office of Nuclear Security and Incident Response (NSIR) and the Office of Nuclear Reactor Regulation (NRR), an exit meeting was conducted via telephone phone on January 25, 2013.

The objective of this inspection was to assess the implementation procedures and processes of your Palisades Nuclear Plant that are required by Title 10 of the Code of Federal Regulations (CFR) 50.54(hh)(1), which provides the requirements for responding to a potential aircraft threat. The results from this inspection, along with the results from this inspection performed at other operating commercial nuclear plants in the United States, will be used to evaluate the U.S. nuclear industry's readiness to safely respond to similar events. These results will also help the NRC to determine if additional regulatory actions are warranted.

The inspection examined activities conducted under your license as they relate to the implementation of 10 CFR 50.54(hh)(1), your compliance with the Commission's rules and regulations, and with the conditions of your operating licenses. Within these areas, the inspection involved examination of selected procedures and representative records, observations of activities, and interviews with personnel.

Based on results of this inspection, no NRC-identified or self-revealed findings were identified. However, five observations related to procedures and communications were identified by the inspectors which required additional clarification and attention by the licensee. The observations were of very low safety significance and were determined not to be violations of regulatory requirements.
