NOTE TO FILE: SSD Case File #13-05
 Lunar Corporation
 Sealed Source and Device Registration
 NR-8267-S-801-S (Supersedes NR-0430-S-103-S)

FROM: John Jankovich/Lymari Sepulveda /RA/
 Licensing Branch, FSME/MSSA

SUBJECT: No Checklist Used, no Safety Evaluation Performed

On September 19, 2012, the Licensing Branch received an e-mail from Rosalyn Jones/Accounts Receivable Branch/CFO indicating that the registration certificate NR-0430-S-103-S was still active and was going to be invoiced; however, the materials license associated with it was terminated on 6/19/1986. The Licensing Branch reviewed the information and determined that an inactive registration certificate should be issued. The staff was not able to obtain, for inactivation, the information listed in the applicable guidance, i.e., Section 13.4, NUREG-1556, Vol. 3., Rev. 1, due to the licensee being out of business since 1986.

Based on the information above the registration certificate NR-0430-S-103-S has been inactivated. For the inactivation, no checklist was used because no safety evaluation was performed.
