SUBJECT: ANNUAL ASSESSMENT LETTER FOR ARKANSAS NUCLEAR ONE, UNITS 1  
AND 2 (REPORT 05000313/2012801 AND 05000368/2012801)

Dear Mr. Browning:

On February 13, 2013, the NRC completed its end-of-cycle performance review of Arkansas Nuclear One, Units 1 and 2. The NRC reviewed the most recent quarterly performance indicators (PIs) in addition to inspection results and enforcement actions from January 1, 2012 through December 31, 2012. This letter informs you of the NRC's assessment of your facility during this period and its plans for future inspections at your facility.

The NRC determined that overall, Arkansas Nuclear One, Units 1 and 2, operated in a manner that preserved public health and safety and met all cornerstone objectives. The NRC determined the performance at Arkansas Nuclear One, Units 1 and 2, during the most recent quarter was within the Licensee Response Column of the NRC's Reactor Oversight Process (ROP) Action Matrix because all inspection findings had very low (i.e., Green) safety significance, and all PIs indicated that your performance was within the nominal, expected range (i.e., Green). Therefore, the NRC plans to conduct ROP baseline inspections at your facility.

In our annual assessment letter dated March 5, 2012 (ML120610412), the NRC opened a substantive cross-cutting issue (SCCI) with the aspect of conservative assumptions in decision-making and adoption of requirements to demonstrate that the proposed action is safe in order to proceed rather than a requirement to demonstrate that it is unsafe in order to disapprove the action (H.1(b)). On February 11, 2013, the resident inspectors completed a focused baseline inspection of your corrective actions which were developed to address the substantive cross-cutting issue described above. The inspectors concluded that your staff thoroughly evaluated the issue through a root cause evaluation, and that the site personnel have demonstrated improved performance in verifying assumptions used in the decision-making process, which has facilitated conservative decision-making when challenged by plant issues. In addition, since the implementation of these corrective actions, there have been no safety significant findings identified. Based on these results, we are closing the substantive cross-cutting issue for conservative assumptions in the decision-making component.

The enclosed inspection plan lists the inspections scheduled through June 30, 2014. Routine inspections performed by resident inspectors are not included in the inspection plan. The inspections listed during the last nine months of the inspection plan are tentative and may be revised at the mid-cycle performance review. The NRC provides the inspection plan to allow for the resolution of any scheduling conflicts and personnel availability issues. The NRC will contact you as soon as possible to discuss changes to the inspection plan should circumstances warrant any changes. This inspection plan does not include security related inspections, which will be sent via separate, non-publicly available correspondence.

In accordance with 10 CFR 2.390 of the NRC's Rules of Practice, a copy of this letter will be available electronically for public inspection in the NRC Public Document Room or from the Publicly Available Records (PARS) component of NRC's document system (ADAMS). ADAMS is accessible from the NRC Web site at <http://www.nrc.gov/reading-rm/adams.html> (the Public Electronic Reading Room).

Please contact me at (817) 200-1574 with any questions you have regarding this letter.

Sincerely,

Donald B. Allen, Chief  
Project Branch E  
Division of Reactor Projects
