Division of Construction, Inspection
& Operational Programs
Office of New Reactors

SUBJECT: SUMMARY OF FEBRUARY 20, 2013, PUBLIC MEETING WITH
AP1000 OWNERS GROUP ON NEW REACTOR OPERATOR
LICENSING

On February 20, 2013, the U.S. Nuclear Regulatory Commission (NRC) staff held a category 2 public meeting with the AP1000 Owners Group (APOG) on New Reactor Operator Licensing at the Region II Offices in Atlanta, GA to discuss the ongoing issues, challenges and concerns to administering licensed operator examinations under the existing process for new AP1000 units. Enclosure 1 lists the attendees at the meeting. Enclosure 2 is the meeting agenda.

The NRC staff discussed with the APOG the future examination schedule and potential issues to completing the exams. The industry has identified issues facing use of the existing examination process. Most of the issues can be waived and completed at a later time, but prior to issuing the license. Possible methods of conducting Job Performance Measures (JPMs) were discussed, such as mockups, 3D models and labs, since it is likely a significant portion of plant equipment will not yet be installed in the plant when the first exams are given. The NRC staff viewed 3D models at Vogtle and determined they were not of sufficient fidelity to be used in the JPM portion of the exam at this time; however a recent virtual reality demonstration at an industry conference showed significant improvement from earlier models. It was also reiterated by the NRC staff that the in-plant JPMs are part of the operational test and will be required to complete that portion of the examination.

Performance of licensed operator candidate's reactivity manipulations was also discussed and it was determined that these could potentially be waived, with the license not being issued until their completion (when simulator availability allows them to be performed). The revision to NUREG-1021, Rev. 10, Operator Licensing Examination Standard for Power Reactors, is on track to be issued in calendar year 2013.

The NRC staff and APOG discussed whether or not the 'structured observations' for cold license candidates, stated in the NRC endorsed NEI 06-13A document, required the license candidates to be in the control room the entire time or included operational shift activities outside the control room. The NRC staff agreed to evaluate this issue.

The next quarterly meeting is tentatively scheduled for July 2, 2013 at NRC Technical Training Center in Chattanooga, TN.

Action items for both the industry and the NRC were assigned and will be reviewed at the next meeting. Tentative agenda items for the next meeting were also listed.

Questions and comments raised by meeting participants will be evaluated by the NRC staff.

Enclosures: As stated
