Office of New Reactors

Subject: Reply to clarification request

Your ref.: NRC letter dated January 17, 2013: MANGIAROTTI'S RESPONSE TO THE U.S. NUCLEAR REGULATORY COMMISSION INSPECTION REPORT NO. 99901416/2012-201 AND NOTICE OF NONCONFORMANCE

Our ref.: GML-28-02-2013-001

Monfalcone, February 28th, 2013

The following is in reply to NRC request to Mangiarotti to indicate what actions will be performed when procuring commercial-grade calibration services from an international calibration service supplier.

- The impacted laboratories currently used by Mangiarotti have been identified.
- For those and any future calibration services the commercial grade dedication process as per our QA Manual and related procedures will be performed.
- The supply critical parameters will be identified.
- The dedication methods agreed among Quality Assurance, Laboratory and Engineering are: Method #1 "Special Inspection and Test" and Method #2 "Commercial Grade Dedication Survey". Surveys will be performed in relation to the verification of the above mentioned critical parameters (Method #2). Specific requirements will be identified and indicated on the Purchase Order. Mangiarotti will check the conformity of the received service respect to the order specifications through a detailed documental verification (Method #1).
- Laboratories identified as suppliers of Commercial Grade Services have already been identified and listed in our Qualified Vendor List.
- The dedication process is monitored thru CAR 318 and it is ongoing.

I hope that this reply satisfies the request of NRC and I stands ready to provide any additional information or clarifications necessary to satisfy any NRC's further requests of clarification.

Yours truly,

Gian Marco Lupi
