Lois, attached is the draft white paper that Walt initiated and that I've been trying to put into English. It's about 80% complete. Near the end the explanations are inadequate and the logic does not flow. This is the area needing work.

Jeff,

I understand that many months ago, you had gotten calculation input from Walt Rogers regarding the relative risk contributions from various initiatives at Oconee (NFPA 805, turbine HELB, MSIVs, etc.). Do you recall this input? If so, do you still have it?

Lois
